## EDUCATION

**Shenyang Urban Construction University** Sep. 2021 - Jul. 2026
Bachelor of Architecture (5 years)

- Average: 89.42/100
- Honors: National Encouragement Scholarship (2024); University Excellent Student (2023-2024)

## INTERNSHIP EXPERIENCES

**Shenyang Wanxiang Urban Planning and Architectural Design Center** Oct. 2024 - Oct. 2025
*Intern, Architecture and Planning Design Department*

- Conducted comprehensive preliminary site investigations and user interviews to gather critical data and define project requirements.
- Developed mid-stage design visualizations, presentation materials, and integrated models to synthesize and communicate design proposals.
- Authored the feasibility study report for the Northeast Xinfadi Agricultural Supply Chain Center Phase II Project [B0102(1)], providing key insights for the investment decision-making process.

**Shenyang Landscape Planning and Consulting Center** Apr. 2023 - Oct. 2024
*Intern, Architecture and Planning Design Department*

- Performed on-site surveys and stakeholder interviews during project initiation to inform evidence-based planning strategies.
- Created detailed visual renderings, presentation decks, and physical models to support mid-stage design reviews and stakeholder alignment.

## PROJECT EXPERIENCES

**Tonghua Economic and Technological Industrial Park Emergency Firefighting and Service Center Infrastructure (Phase I) Construction Project** Mar. 2025

- Conducted site analysis and master planning to establish the foundational project framework.
- Developed architectural floor plans and produced perspective renderings to visualize the final design.

**Northeast Xinfadi Agricultural Product Supply Chain Center Phase II Project** Nov. 2024

- Conducted preliminary on-site research and user interviews to inform the foundational design strategy.
- Produced master plans, perspective renderings, and authored the functional zoning plan specification to define the project vision.

## PUBLICATIONS

**Personalized Education Experience Based on Virtual Reality Technology** Jul. 2024
*First Author, New-Age Technology. CN11-3750/N, ISSN1006-981X.*

**Urban Renewal Design Led by Shenyang TOR Mode Rail Transit from a Stock Perspective** Mar. 2024
*Second Author, Peak Data Science. CN11-9270/J, ISSN1672-2324.*

**Agricultural Products Exhibition Strategy under the Background of Rural Revitalization** Dec. 2023
*First Author, Architectural Practice. CN10-1584/TU, ISSN2096-6458.*

## COMPETITION AWARDS

**Third Prize,** The 3rd Liaoning College Students Green Building Innovation Design Competition Jun. 2025
**Third Prize,** The 10th National College BIM Graduation Design Innovation Contest Jun. 2024
**Third Prize,** The 4th Northeast China Senior - Friendly Architectural Design Competition Mar. 2024
**Third Prize,** Liaoning College Students Innovation & Entrepreneurship Competition Mar. 2024
**Excellence Award & Teamwork Award,** "Sunward Growth" Architectural Culture Festival - College Students Physical Construction Competition, Shenyang Urban Construction University Oct. 2022 - Dec. 2023

## SKILLS

# Capsule Reborn

Reimagining the Capsule Tower

Individual Work
Time: 2025

This project is based on the Nakagin Capsule Tower, critiquing the "rigid metabolism" of Metabolism and proposing a "flexible metabolism" approach. Following the Japanese government's decision in April 2022 to demolish the Nakagin Capsule Tower, its future has become uncertain. This project aims to redefine the vitality of architecture by exploring how to preserve its historical significance while adapting to contemporary needs.

Drawing inspiration from the relationship between architecture and clothing, the design envisions buildings as removable, transformable, and iterative—possessing dynamic adaptability. Utilizing three key tailoring techniques, the design reimagines the building's life cycle, advocating a shift from the "eternal monument" to a "temporary, participatory, reversible" space.

Challenging traditional Metabolism thinking, the project proposes a new direction for architecture: buildings that can be reconfigured and renewed like clothing. By using soft materials, the design transforms architecture from fixed forms to flexible, adaptive spaces that evolve over time to meet changing needs.

Comparison of Functionality Between Clothing and Architecture:

Protect your privacy

With architecture

Curtains for privacy

Without architecture

Architecture creates privacy: outdoors, couples are limited to hand-holding; indoors, they can be more intimate.

Celebrities go out to hide their identities through sunglasses, hats and masks.

Clothing protects privacy by covering the body, helping people feel secure in public while balancing exposure and concealment.

Without clothes

With clothes

Prevent climate damage

Without architecture

Without buildings, people rely only on clothing; with buildings, an extra shell stabilises temperature and improves comfort.

Buildings stay warm through heaters

Porosity Skincare Resilient

Protection of internal Organs

Protect Against the Cold

Windbreaks

Rainproof

Clothing has thermal insulation; people with adequate clothing can better maintain body temperature and comfort, while those with insufficient clothing are more vulnerable to cold.

With clothes

Without clothes

Prevent injury

Architecture has a protective function: with buildings, they can act like city walls to resist invasion and danger; without buildings, people are more easily exposed to threats such as wild animals.

Architecture secures privacy through windows and doors

With architecture

Without architecture

Long trousers can protect knees from abrasions and frostbite.

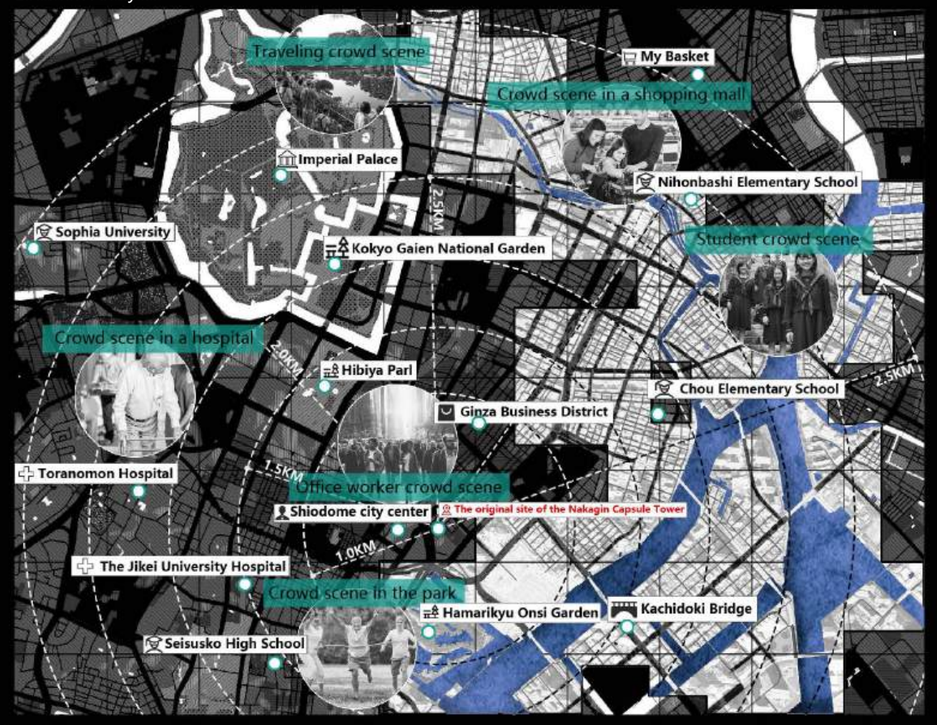

Shoes protect against outdoor nails, foreign objects, barbs, etc.

Without clothes

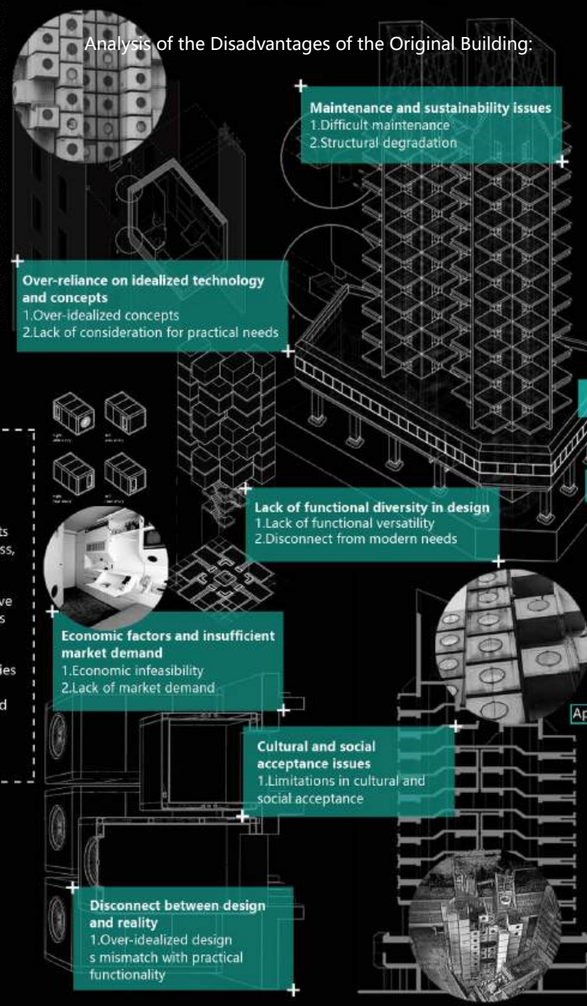

With clothes

Clothing protects the body; with clothes or gear, people can move more safely; without them, the body is easily hurt by hard objects.

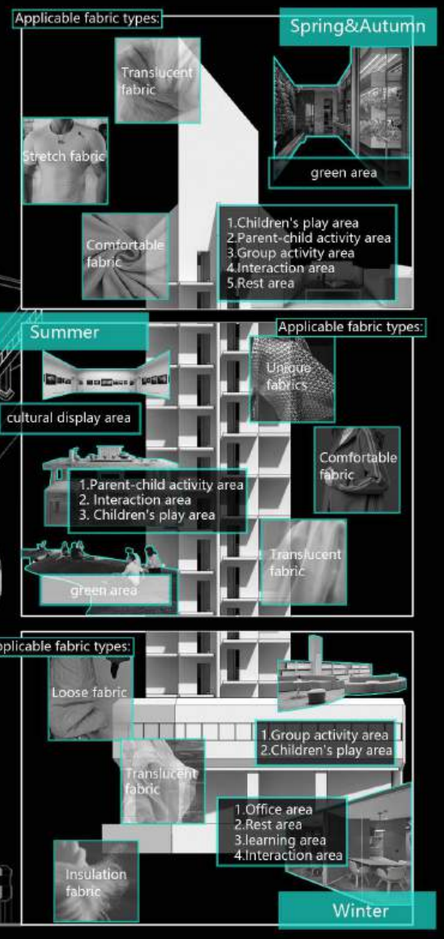

Location Analysis:

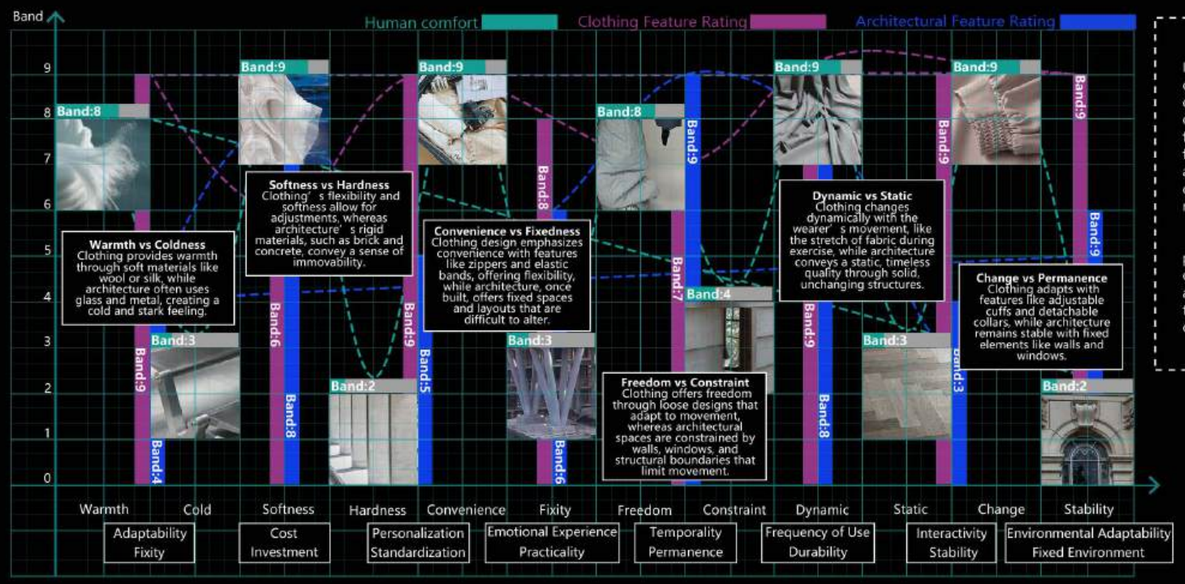

Analysis of the Disadvantages of the Original Building:

Functional Concept:

Comparison and Analysis of Performance Between Architecture and Clothing:

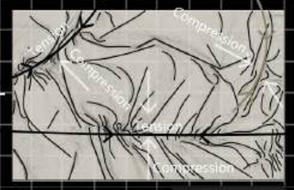

In dimensions directly related to human comfort—such as warmth, softness, convenience, freedom and dynamic change—clothing performs better thanks to its flexibility and adjustability; whereas in hardness, fixity, constraint, stability and durability, architecture takes the lead, reflecting its durable, standardized and investment-intensive nature. The clear contrast between clothing' s "flexible adaptability" and architecture' s "rigid permanence" reveals new design potential: by introducing clothing-like strategies of layering, adjustability and temporality into architecture, spaces can become more attuned to the body and continually evolve with changing needs.

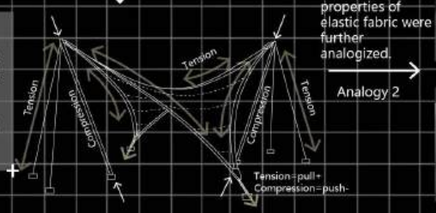

## Tensile Membrane Design Experiment:

Through the mechanical analysis of the pleating method, it was discovered that the forces in the fabric act inward. Subsequently, by applying the analogy method and reversing the forces, the application of tensile membrane design was inspired.

Analogy 1

By using the form of a tensile membrane, the properties of elastic fabric were further analogized.

Analogy 2

The Pleating Method is a draping technique that involves folding fabric in a regular pattern and securing the pleats. It creates layers and movement in the fabric, enhancing its volume, dimensionality, and adding visual rhythm and structure.

### Fabric Experiment 1:
### External Tensile Membrane Experiment 1

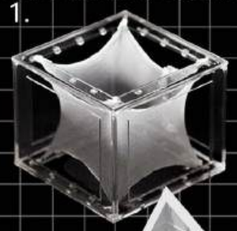

### External Tensile Membrane Experiment 2

By applying and fixing tension to the fabric, observe its tensile effect in an open space, exploring how the fabric forms structure and shape under external tension.

### Fabric Experiment 2:
### Tensile Membrane Experiment in a Small Box

1.

2.

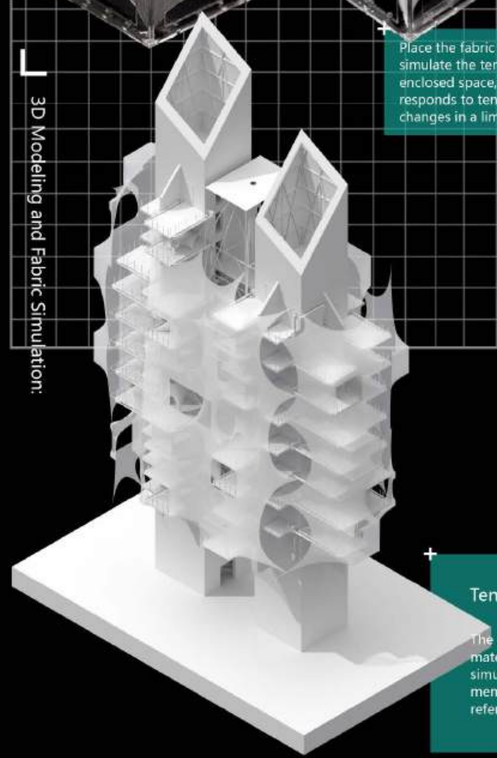

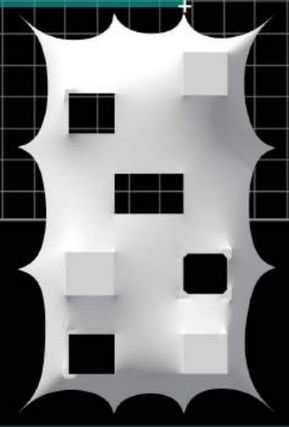

3.

Place the fabric inside a small box to simulate the tensile membrane effect in an enclosed space, studying how the fabric responds to tension and exhibits structural changes in a limited space.

### 3D Modeling and Fabric Simulation:

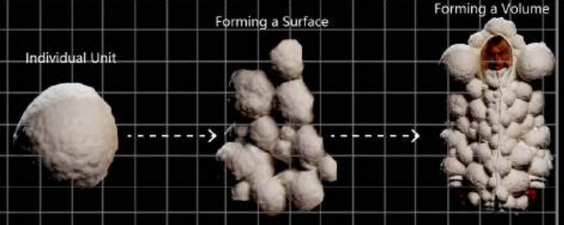

### Tensile Membrane:

The most suitable material is selected through material testing, and 3D modeling is used to simulate the optimal form of the tensile membrane on the building, providing a reference for subsequent handmade models.

## Inflatable Structure Design Experiment:

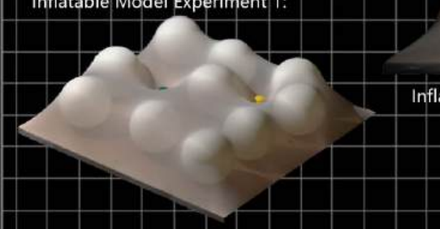

The Bubble Gathering Method is a draping technique that involves gathering fabric and filling or stacking it to create a fluffy, rounded "bubble" effect. It is commonly used in designs like down jackets and puffy skirts, creating a lightweight yet voluminous effect.

The stacking method layers materials to form a structure, similar to how an inflatable model expands with inflation. Both rely on internal forces to unfold and stabilize the material. The stacking method controls layer addition, while the inflatable model's shape depends on the inflation level. This analogy helps understand how an inflatable model develops a dynamic, structured shape.

### Fabric Experiment:
### Inflatable Model Experiment 1:

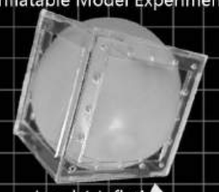

### Inflatable Model Experiment 2:

### Fabric Experiment 2:
### Inflatable Model Experiment in a Small Box:

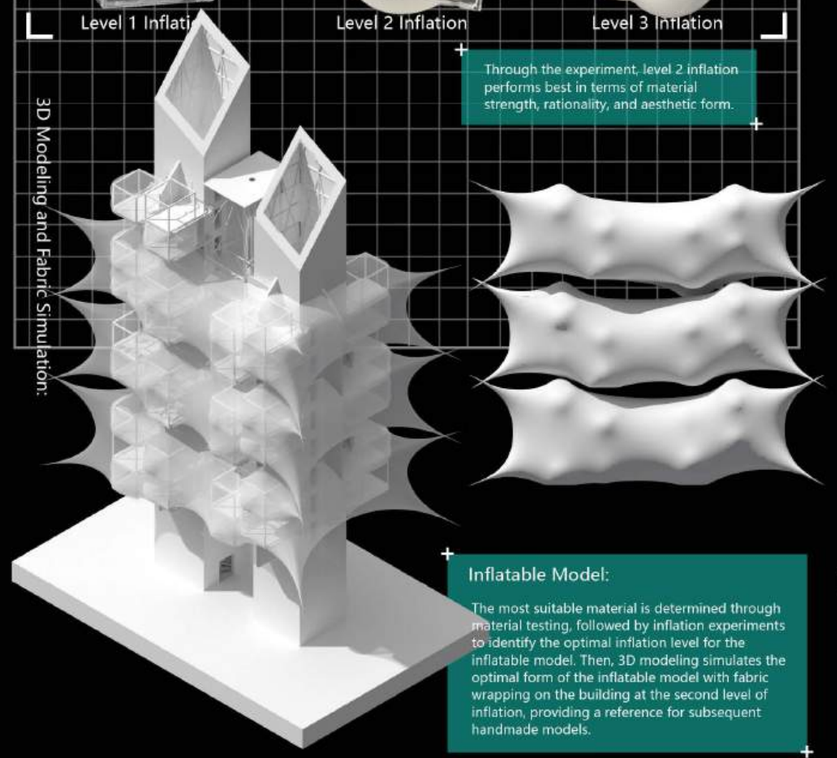

Level 1 Inflati

Level 2 Inflation

Level 3 Inflation

Through the experiment, level 2 inflation performs best in terms of material strength, rationality, and aesthetic form.

### 3D Modeling and Fabric Simulation:

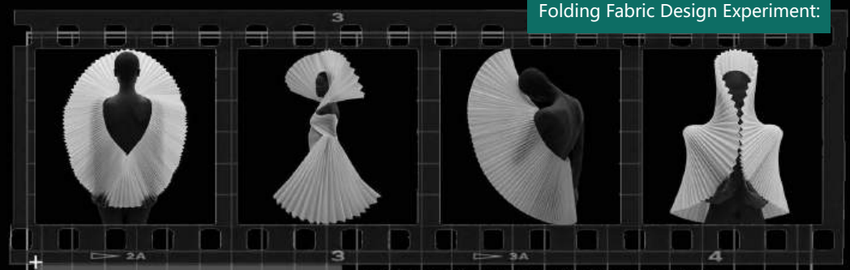

### Inflatable Model:

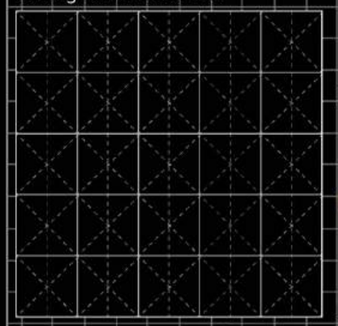

The most suitable material is determined through material testing, followed by inflation experiments to identify the optimal inflation level for the inflatable model. Then, 3D modeling simulates the optimal form of the inflatable model with fabric wrapping on the building at the second level of inflation, providing a reference for subsequent handmade models.

## Folding Fabric Design Experiment:

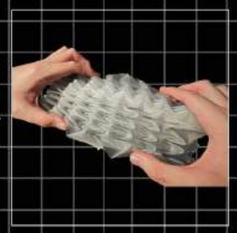

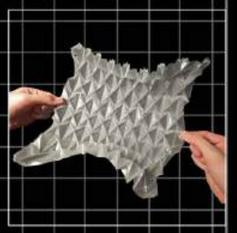

The Folding Method is a draping technique that involves folding fabric into specific shapes and structures to create a unique sense of space and layers. By precisely controlling the folds, it adds fluidity and dimensionality to the garment design.

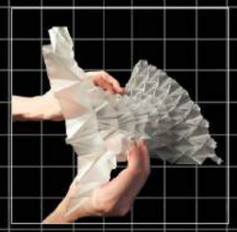

### Folding Fabric Guideline:

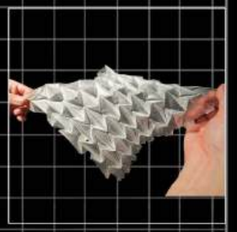

### Fabric Experiment 1: Fabric Shape Testing:

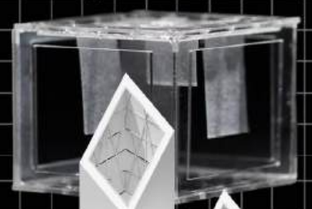

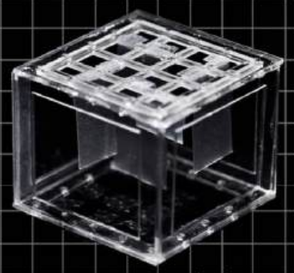

By applying different intensities and directions of force to the fabric, the shape changes of the fabric are tested under various stress conditions, exploring how it responds to the changes in force and the transformation of its form during the folding process.

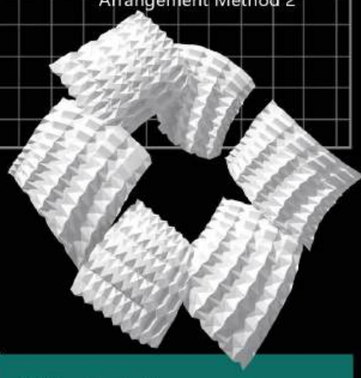

### Fabric Experiment 2:
### Exploring Fabric Arrangement Inside the Box

Arrangement Method 1

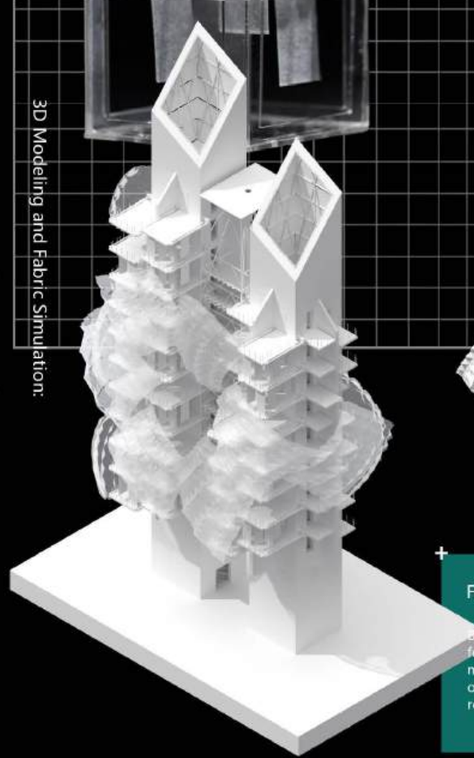

Arrangement Method 2

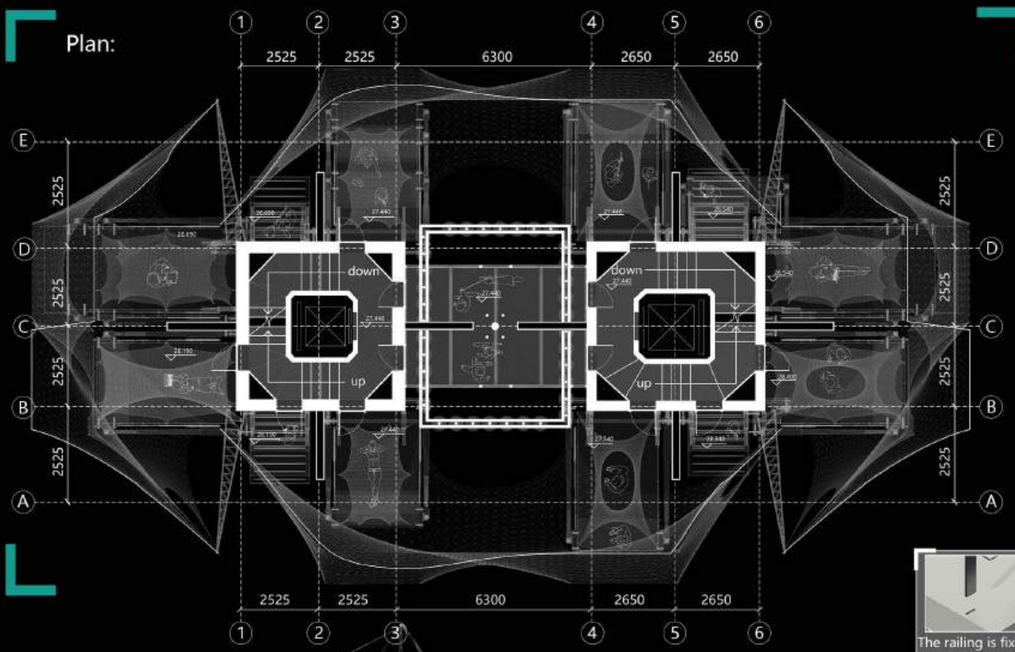

### 3D Modeling and Fabric Simulation:

### Folding Method:

By testing the shape changes of the fabric under force, the optimal stress points are identified. 3D modeling is then used to determine the location of these stress points on the building, providing a reference for subsequent handmade models.

Plan:

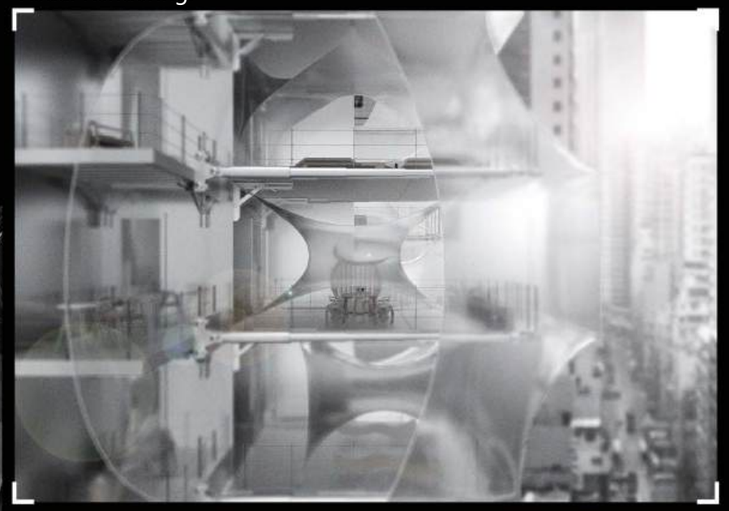

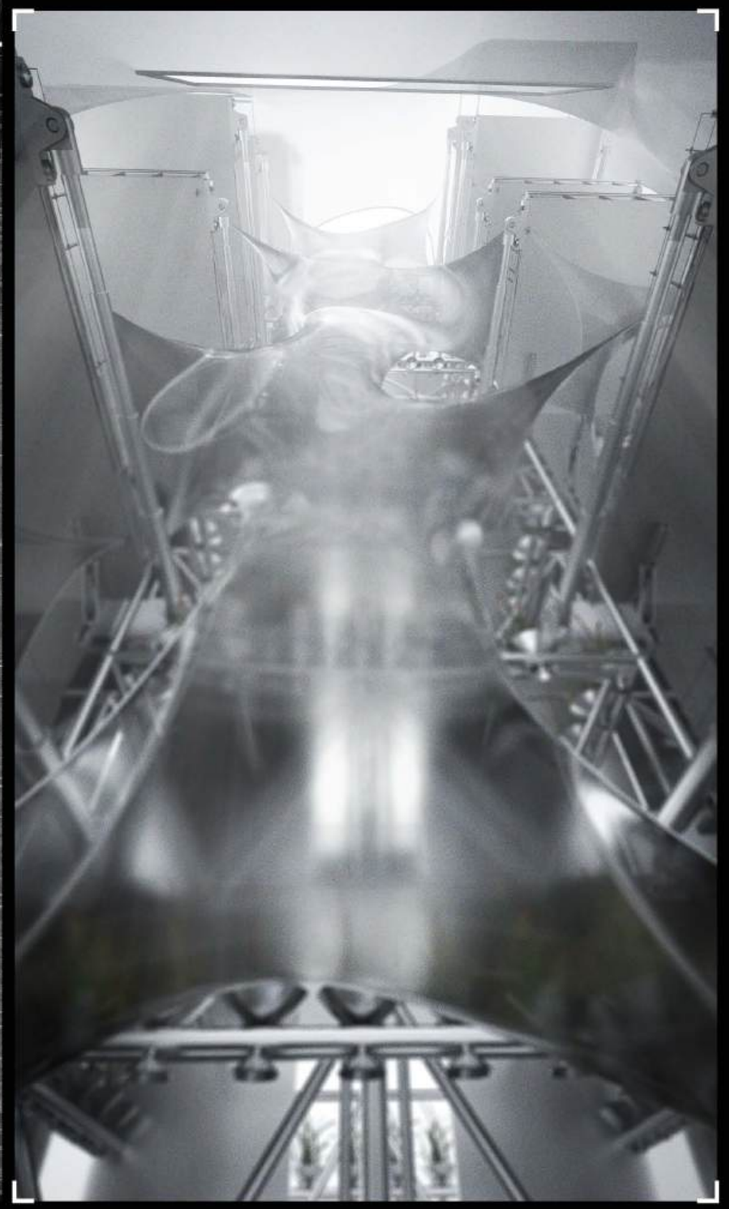

## Form 1: Tensile Membrane

This form is mainly applied in the mild climate of spring and autumn, serving as a recreational and leisure carrier open to the surrounding community. By varying the direction of tension, the height differences, and the opening methods of the membrane, it generates a variety of semi-outdoor spaces—such as sloping surfaces for sitting or lying down, small nodes for performances and street music, zones for children' s play, and areas for temporary markets.

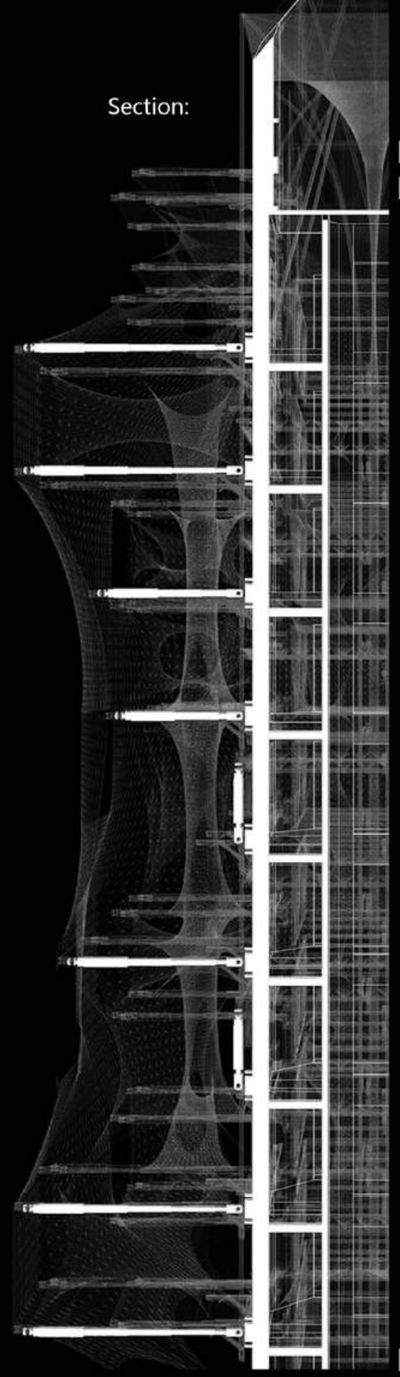

Under the flexible membrane canopy, people can find shade and shelter from the wind, chat and relax, watch events, or spontaneously organise small gatherings. In this way, the "piece of fabric" is transformed from a simple structure into a place that gathers emotions and fosters social interaction. At the same time, it provides a light, occupiable, and re-definable spatial base for urban public life in the spring and autumn seasons.

Visual Rendering:

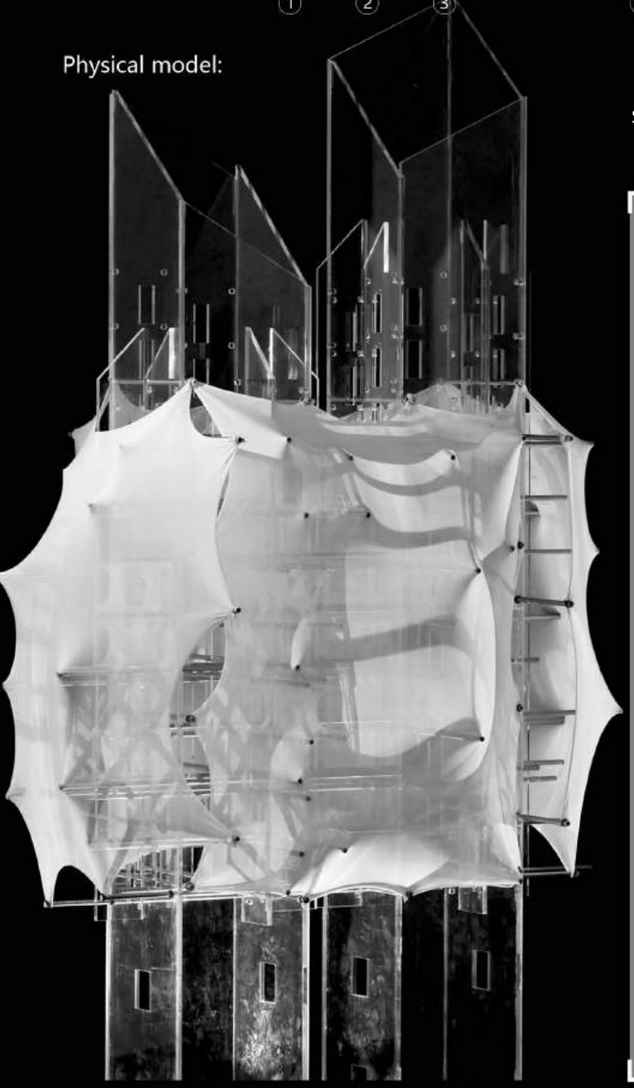

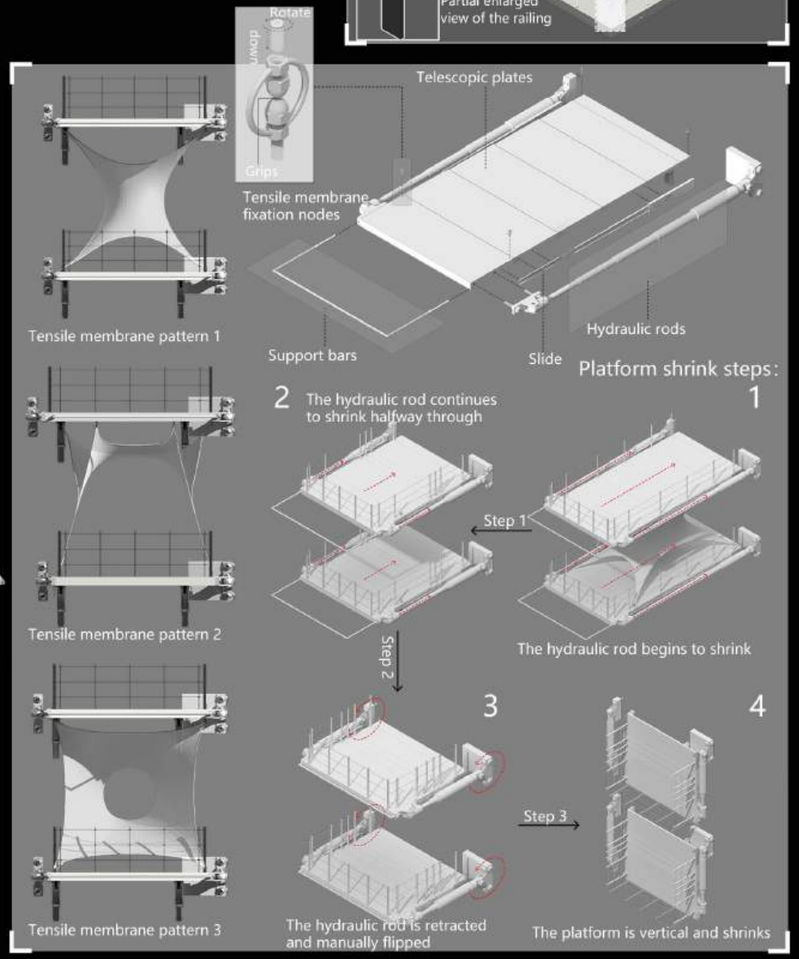

Section:

Physical model:

Structure and Expansion of the Slab:

Visual Rendering:

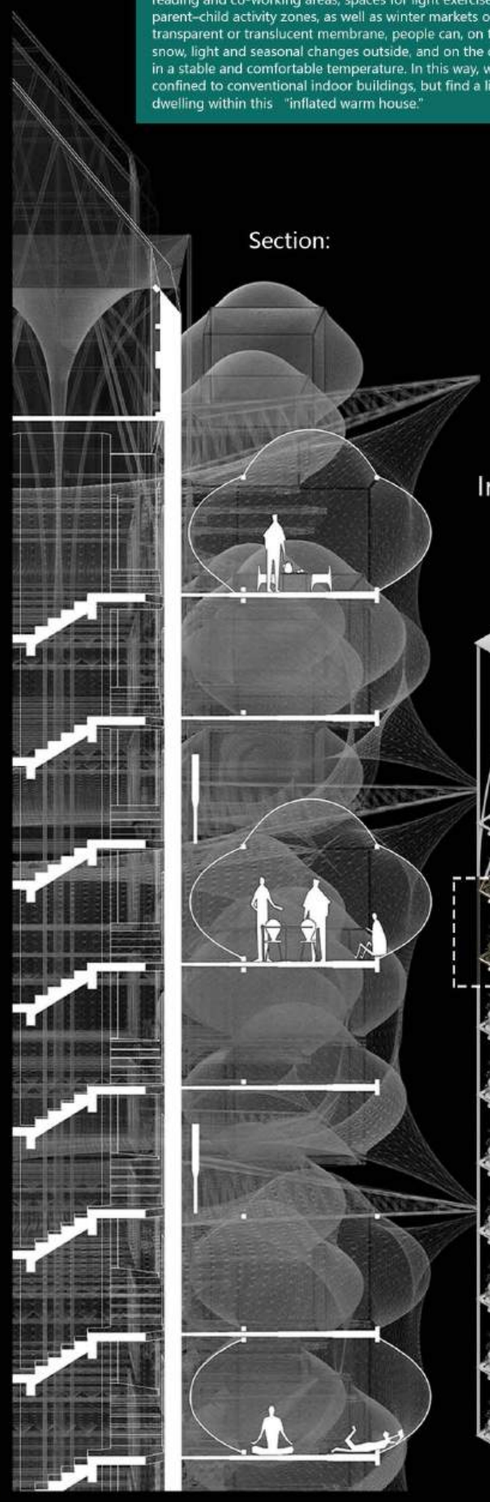

## Form 2: Inflatable Structure

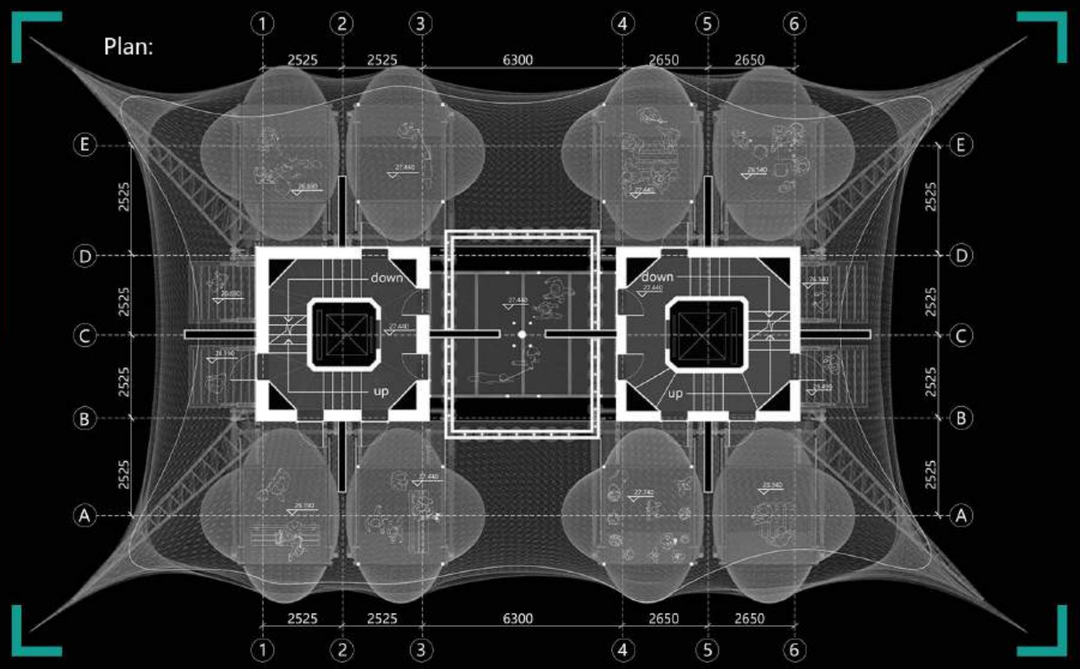

The inflatable structure is mainly applied in the cold winter season, serving as a "temporary warm enclosure" that can be rapidly assembled and dismantled. Through double- or multi-layered membrane construction combined with internal air heating and circulation systems, it creates a relatively enclosed microclimate with good thermal performance, bringing outdoor spaces that are usually abandoned in winter back into everyday use.

Inside the inflatable envelope, a variety of programmes can be flexibly arranged, such as reading and co-working areas, spaces for light exercise and rehabilitation training, parent–child activity zones, as well as winter markets or workshops. Wrapped by a transparent or translucent membrane, people can, on the one hand, still perceive the snow, light and seasonal changes outside, and on the other hand, stay and move around in a stable and comfortable temperature. In this way, winter public activities are no longer confined to conventional indoor buildings, but find a light and temporary place of dwelling within this "inflated warm house."

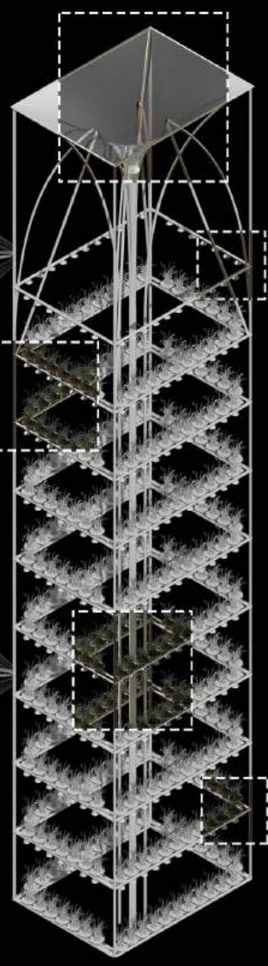

Section:

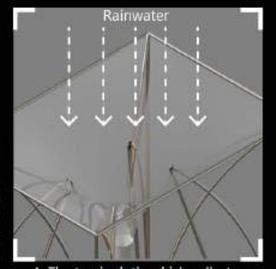

Plan:

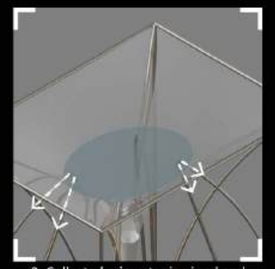

Irrigation system design analysis :

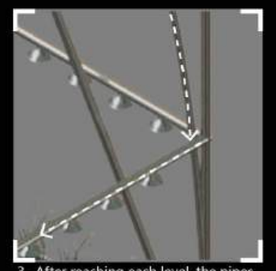

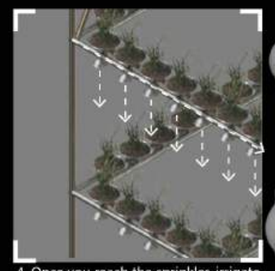

1. The top is cloth, which collects rainwater when it rains

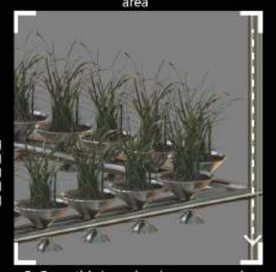

2. Collected rainwater is piped and diverted vertically downward

3. After reaching each level, the pipes divert water horizontally to the sprinkler area

4. Once you reach the sprinkler, irrigate the plants below through a sprinkler

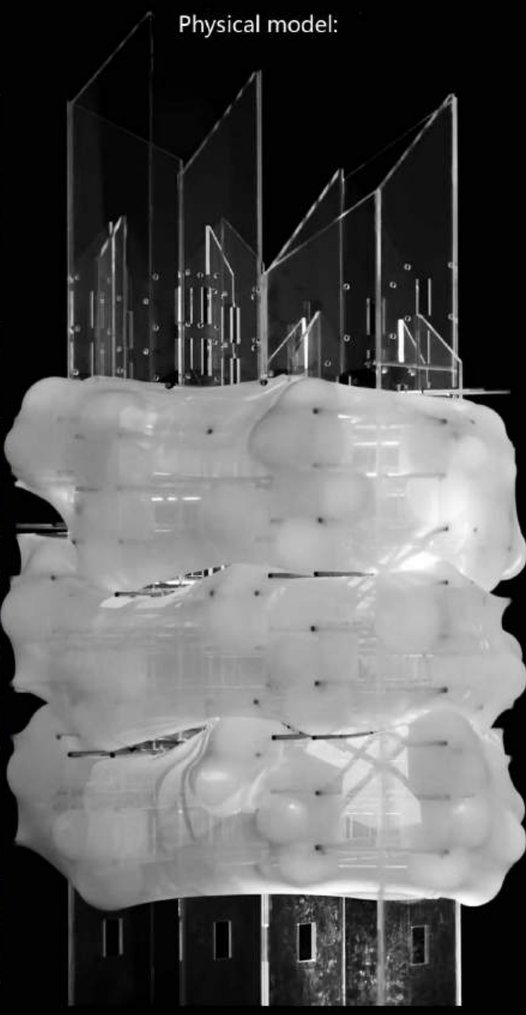

5. Once this layer has been sprayed, rainwater continues to be diverted downward to the bottom

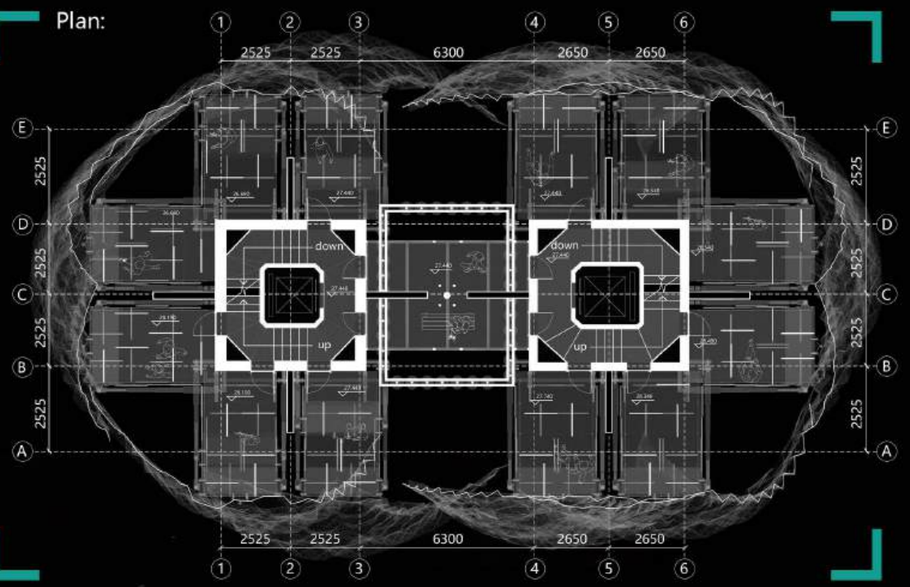

6. After irrigation is done, rainwater is drained into the ground through pipes

Physical model:

Plan:

## Form 3: Folding Method

The folding method is mainly applied to the exterior of the building. By using folding techniques similar to garment pleats and origami, a series of undulating, folded fabric surfaces are created along the façades and eaves. These layers generate continuous bands of shade, while the gaps and creases allow air to flow through, providing sun-shading and enhancing natural ventilation.

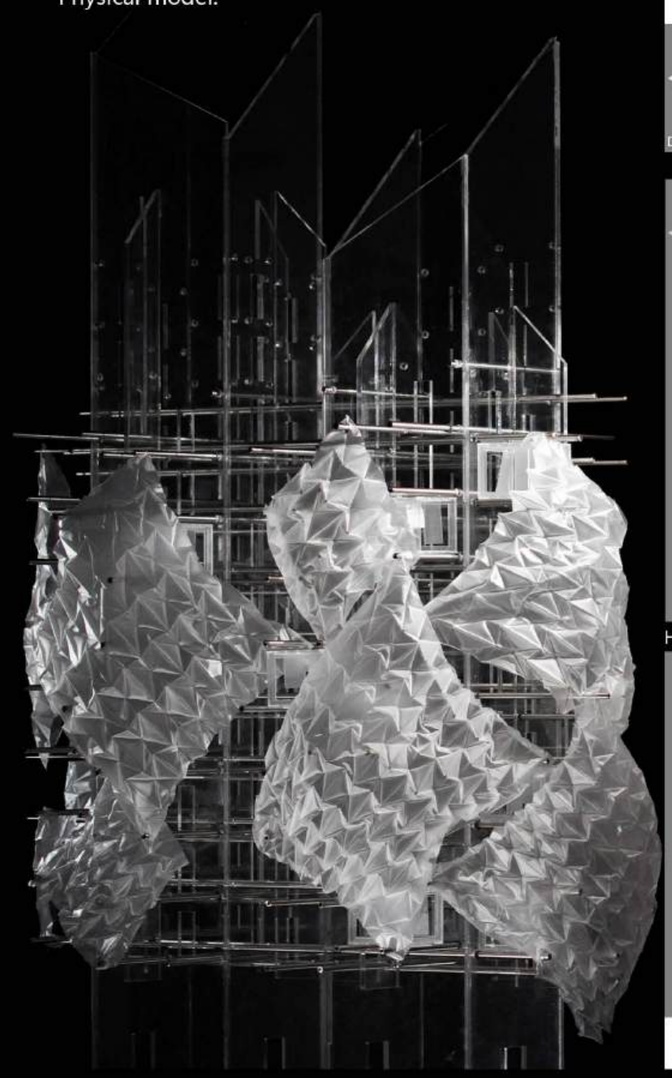

Inside the building, relatively flat fabrics are used as exhibition media: they are hung, tensioned, or used to partially enclose space, forming lightweight display walls and partitions. A key feature is that the exhibition route and patterns of occupation in each small zone are highly adaptable—by simply adjusting the position, height, and degree of enclosure of the fabric, the circulation and pause points can be flexibly reconfigured, allowing each exhibition area to present a distinct viewing rhythm and spatial experience.

# Music Utopia

Designing Space for Pure Musical Experience

Individual Work
Time: 2024

This project stems from an observation of changing perceptions of music: as songs we once loved became overexposed on streaming platforms like TikTok, we began to feel a sense of frustration. Through psychological, sociological, and behavioral analysis, it was found that this emotional shift is closely tied to factors like novelty, ownership, and social validation. The project aims to redefine the experience of music through architecture, transforming it from a mass-consumed commodity into a purer sensory experience.

The design analyzes common music forms in daily life (such as background music, street performances, concerts, live houses, concert halls, vinyl records, white noise, etc.), exploring their emotional impact and spatial characteristics. The core features of each form are distilled and integrated into architectural elements. The goal is to use music as a central architectural element, creating a music utopia where people can interact with space in a pure, immersive musical environment, gaining a deeper musical experience.

Psychological Research

**Maslow's Hierarchy of Needs Theory** suggests that after satisfying their physiological needs, people will seek higher-level needs, including social needs and self-esteem needs, which are closely related to a sense of ownership.

**Leon Festinger's** cognitive dissonance theory suggests that psychological discomfort drives individuals to seek new information, which helps resolve dissonance and bring pleasure.

**Robert James Havighurst's psychosocial theory** focuses on the developmental tasks of the individual over the life cycle. Rebellious behaviour may be a way of coping with these tasks, especially in the search for self-independence and the establishment of individual values.

Sociological Research

**Group Cognition Theory** examines how group interactions shape shared perceptions and values, strengthening group identity and a sense of belonging.

**Social Construction Of Reality** (Berger and Luckmann) emphasises that society is co-constructed by individuals. In social interaction and participation, individuals shape the meaning and structure of society as they engage in social practices that affect their sense of participation.

**Sheldon Stryker's** identity theory highlights that identities are shaped through social interaction, with individuals reinforcing their sense of self by engaging in social activities.

Behavioural Research

Self-determination theory (SDT) by **Deci and Ryan** examines motivation, distinguishing between extrinsic (external rewards) and intrinsic (internal drives) motivation. It suggests that autonomy and internal motivation lead to greater satisfaction and well-being.

**Self-determination theory** by Deci and Ryan highlights individuals' control and motivation over their behavior. In art, intrinsic motivation may stem from a love of creating autonomously and freely.

**Marvin Zuckerman's** novelty and stimulus-seeking theory emphasises the individual's search for novelty and stimulus. Exploratory desire can be interpreted as a strong desire for novelty and excitement, in which the individual explores uncharted territory to gain new experiences and sensations.

| NICHE | POPULAR | INDUCTION |
|---|---|---|
| Niche music satisfies the individual's sense of ownership and makes them feel that their choices are different from the mainstream. Emotional connection with the niche music object is established, which enhances the degree of favoritism. | Individuals whose previously exclusive niche music has become popular feel that their personal preferences are now aligned with the dominant views of society, resulting in a loss of the sense of ownership that they had previously built up. | Sense of ownership |
| Individuals may choose to like niche music because of dissatisfaction with mainstream culture or rebellion against traditional values, and this choice is both a form of resistance and a way to express individual independence. | As music becomes more popular, the original sense of rebellion gradually diminishes, causing some original fans to feel that they have lost their unique musical experience and triggering a sense of mediocrity towards the original music. | Rebelliousness |
| Niche only when you want to listen to it Keep it fresh. | When music becomes popular, you hear it everywhere in your daily life and get bored easily. | Freshness |
| Niche music often spawns specific subcultural groups, and individuals may feel a stronger sense of belonging in niche music communities. | When music becomes popular, the original niche may change, causing individuals to feel the discomfort associated with group identity and leave. | Sense of community belonging |
| When it's niche, the main way to experience it is to listen to it or sing it amongst a small group of people, and it's very participatory. | After the music mass is often heard by the general public in various ways, individual participation becomes weaker | Sense of participation |
| Liking niche music can help individuals establish a social boundary and form an identity with those who share similar interests. | As music becomes more popular, communities that initially built their identities may feel that their sense of specialness is diminishing as a result, and may therefore lose the sense of identity they originally built. | Sense of identity |
| You can choose your favorite music from a wide range of music, and you can feel like you're making your own choices. | You're constantly forced to listen to music, and you lose your sense of choice. | Choice |
| Individuals who prefer niche music may be more willing to engage in aesthetic exploration, discovering new artistic styles and musical genres. The process of exploration itself is fun and increases the individual's enjoyment of the music. | With the popularity of music, the original desire to explore may be constrained, leaving individuals feeling saturated with information and frustrated. | Desire for exploration |
| In the niche music community, music that is not capitalized is artistic, and this freedom and uniqueness is in line with the perception of the niche community. | When music is promoted on a large scale, individuals may be attracted to it because of the media influence, but they may also be turned off by the over-commercialization and feel that the music has lost its purity and originality. | Art and Capital |

KTV

Headphone music White noise Vinyl records KTV Live house Concert hall Concert Street performance Background music

O C E P I E O C A B P C O B P B I A B I A R P A R I A

Background music changes based on the situation, adding atmosphere and setting the right mood.

Background music is typically played quietly to create an atmosphere without drawing focus.

Street performers often improvise, incorporating the sounds of the city and engaging with passersby, showing empathy in their reinterpretation of music.

Street performers and the audience have no stage separating them, allowing for a close proximity that enhances participation, interaction, and empathy.

Concerts offer a lively atmosphere and interaction. The audience shares the joy and passion of the music, interacting with the performers to create unforgettable moments.

Live House music provides an intimate setting with direct interaction. The audience is close to the performers, enabling direct interaction and the creation of unique musical moments together.

Live houses are smaller venues where the audience can see and interact closely with the performers.

Vinyl provides top-notch sound quality for a unique and purely musical experience.

In KTV rooms, guests enjoy privacy and personalized experiences, selecting songs based on their preferences.

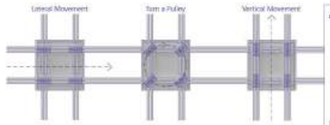

Private Room

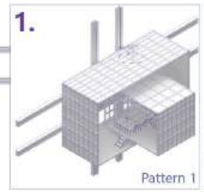

Lighting

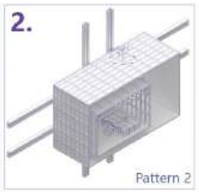

The concert hall's solemn atmosphere, along with exceptional performances, showcases the depth and richness of music.

Concert spaces provide excellent acoustics and professional performances, blending a grand atmosphere with artistic expression.

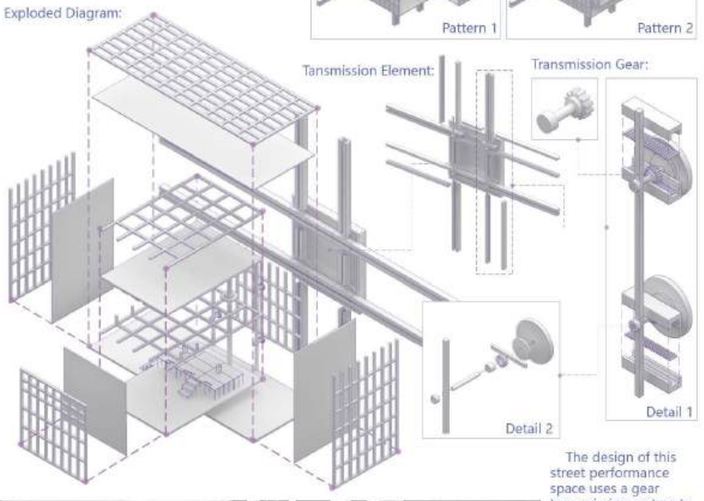

Study room white noise is persistent, uniform and stable, contributing to increased learning and productivity.

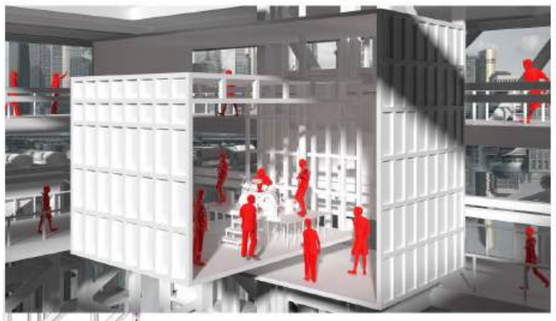

Exploded Diagram:

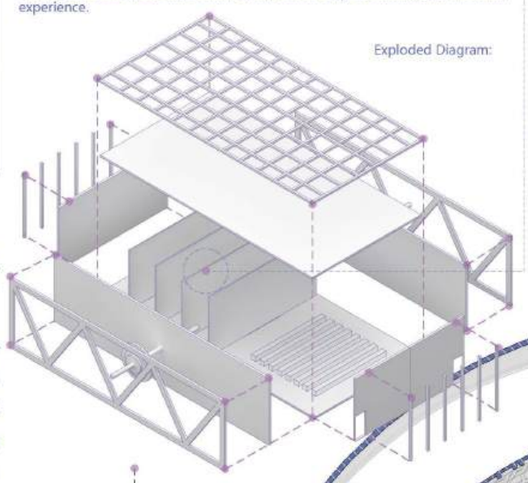

The design of this street performance space uses a gear transmission system to create dynamic, flexible layouts by allowing the performance area to shift horizontally and vertically. Additionally, the identity transformation feature, involving Pattern 1 and Pattern 2, enables the roles of audience members and performers to interchange, enhancing interaction and enjoyment. This design improves spatial efficiency and enriches the performance experience by fostering greater engagement.

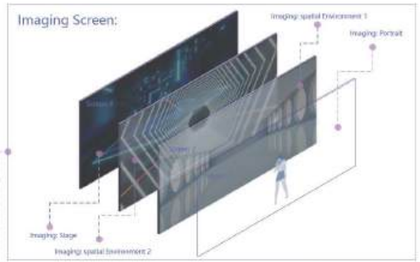

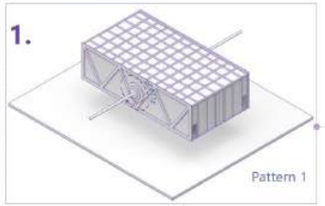

The concert venue design uses advanced holographic projection, mixed reality (MR), and glasses-free 3D technologies to create impressive visual effects in a limited space. These technologies deliver realistic 3D imagery and seamlessly blend virtual elements into the real environment, allowing audiences to experience immersive effects without glasses. Small spatial movements enhance the dynamic feel of the venue, increasing audience engagement by offering different views and sounds from various angles, enriching their overall experience.

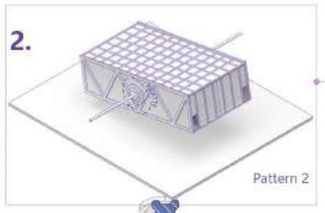

Exploded Diagram:

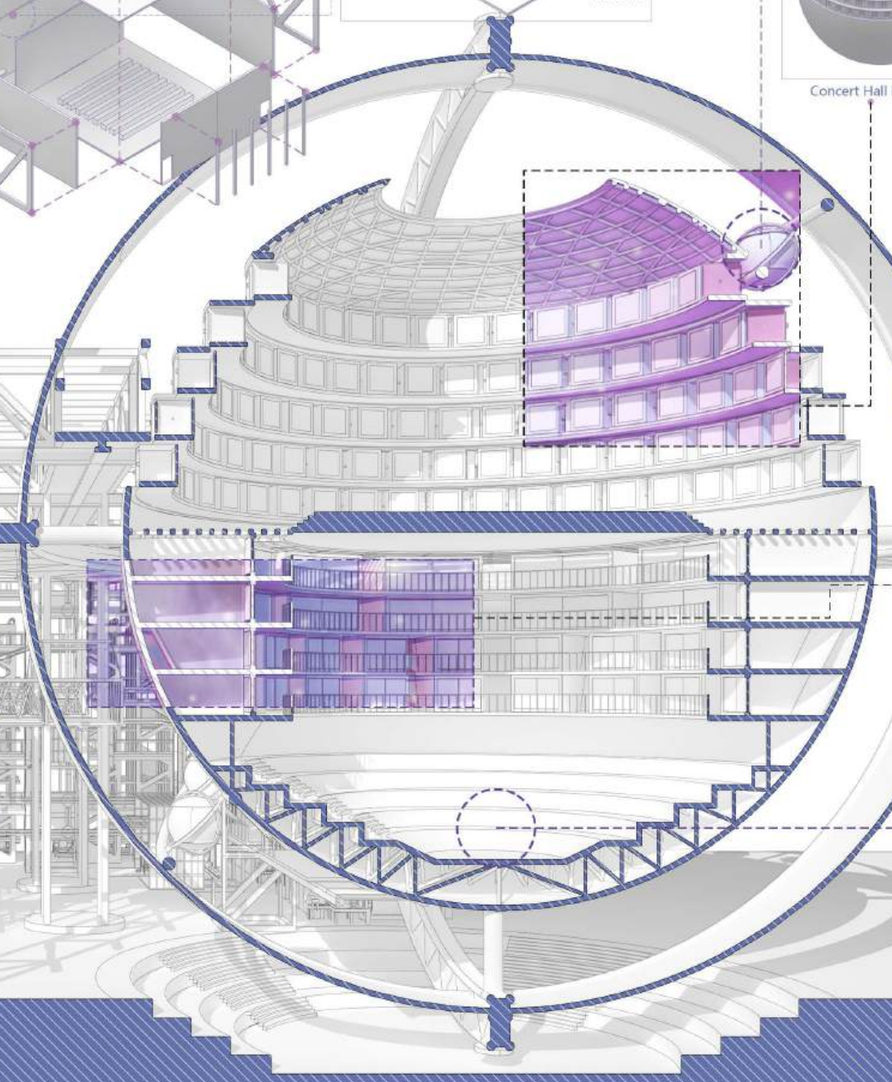

Imaging Screen:

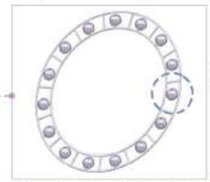

Enhance the indoor experience with small rotations

The upper hemisphere music hall features innovative designs, including private booths for personalised experiences, a Ferris wheel-like vertical transport system for unique floor movement, and rotating booths on each level that enhance 360-degree sensory engagement. Booth designs across different levels cater to both visual and auditory experiences (Levels 1-2) and immersive auditory enjoyment (Levels 3-5), fulfilling essential music hall requirements while introducing new spatial interactions and sensory experiences through advanced design and technology.

Support Structure1:

BOX Setting:

Box Area:

Open Area:

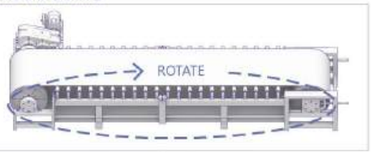

In the lower hemisphere, two complementary spaces have been created: an open area that uses music from the upper hemisphere's music hall to boost productivity and creativity, and a private booth-style space for focused work or study. These spaces offer privacy and personalized experiences, catering to diverse user needs while ensuring comfort, flexibility, and functionality.

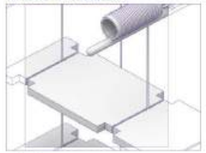

This space integrates the characteristics of vinyl record lounges and KTV rooms, with a predominant design in compartmentalised form. Inspired by the concept of multi-storey car parks, it utilizes conveyor belts and hoisting rope systems to position the compartments within the space. This fusion aims to create a unique spatial experience that combines the entertainment nature of KTV with the leisurely atmosphere of vinyl record lounges. In terms of design philosophy, the KTV area features karaoke machines for interactive music and entertainment, while the vinyl lounge area focuses on providing relaxation and leisure. This hybrid design not only meets diverse functional needs but also explores new possibilities in aesthetics and spatial perception, showcasing innovative cross-disciplinary integration in modern design.

Infield Area:

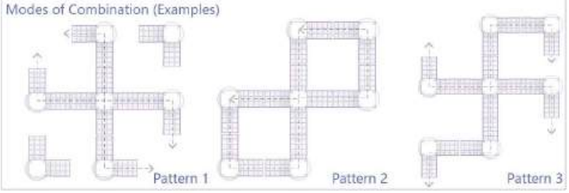

Outfield Area:

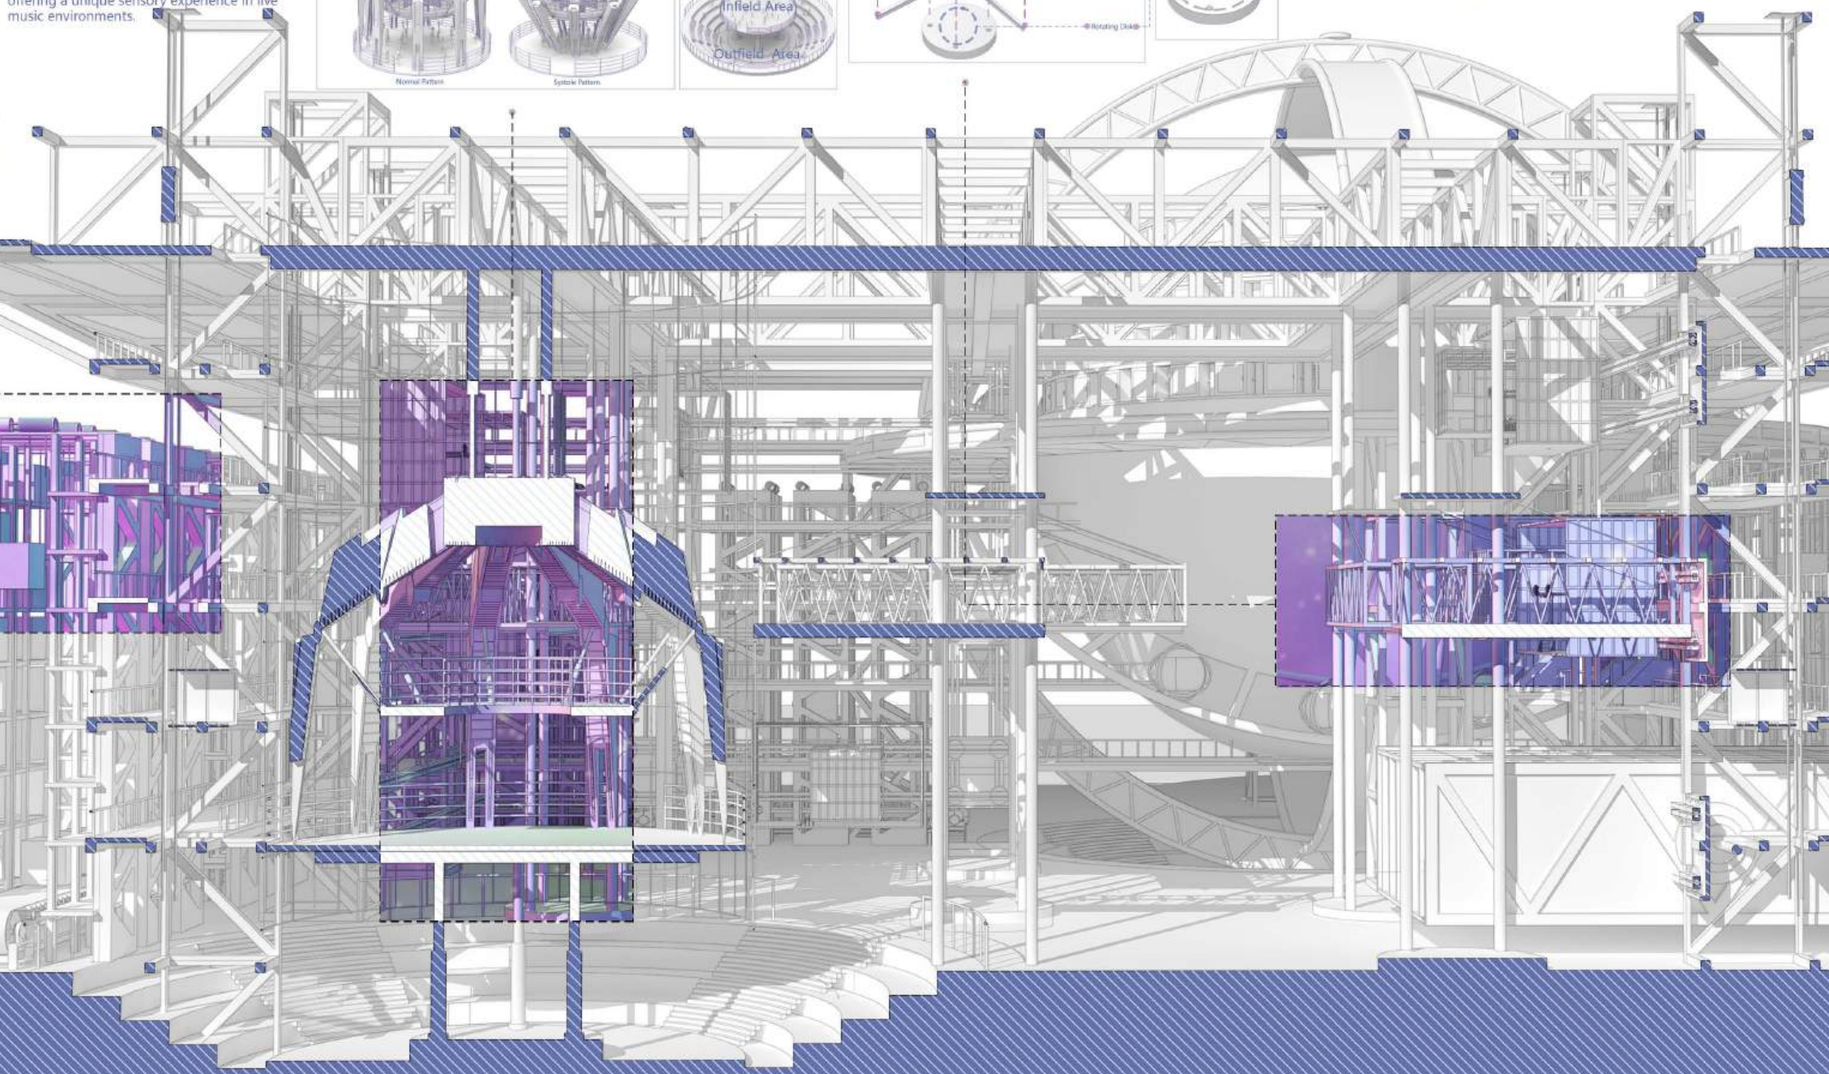

The background music space showcases innovation and flexibility in spatial division, crucial to the overall music experience. It divides into adaptable forms using vertical movement and rotation, creating diverse music scenarios. This dynamic design enhances immersion and engagement, serving as a central hub in the integrated music environment. It seamlessly connects areas, offering smooth transitions and a unified yet varied musical experience across the space, integrating well with surrounding environments for a comprehensive spatial experience.

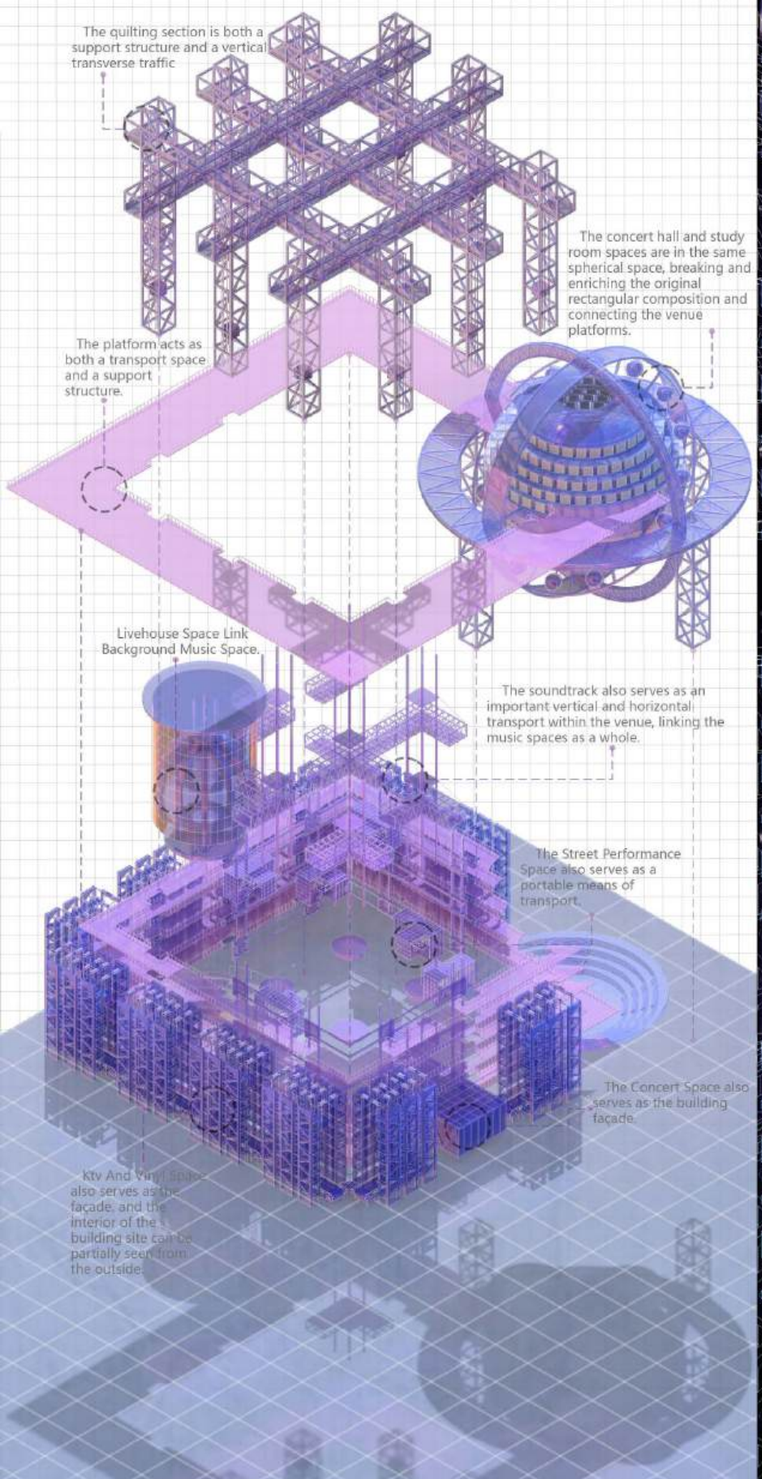

Modes of Combination (Examples)

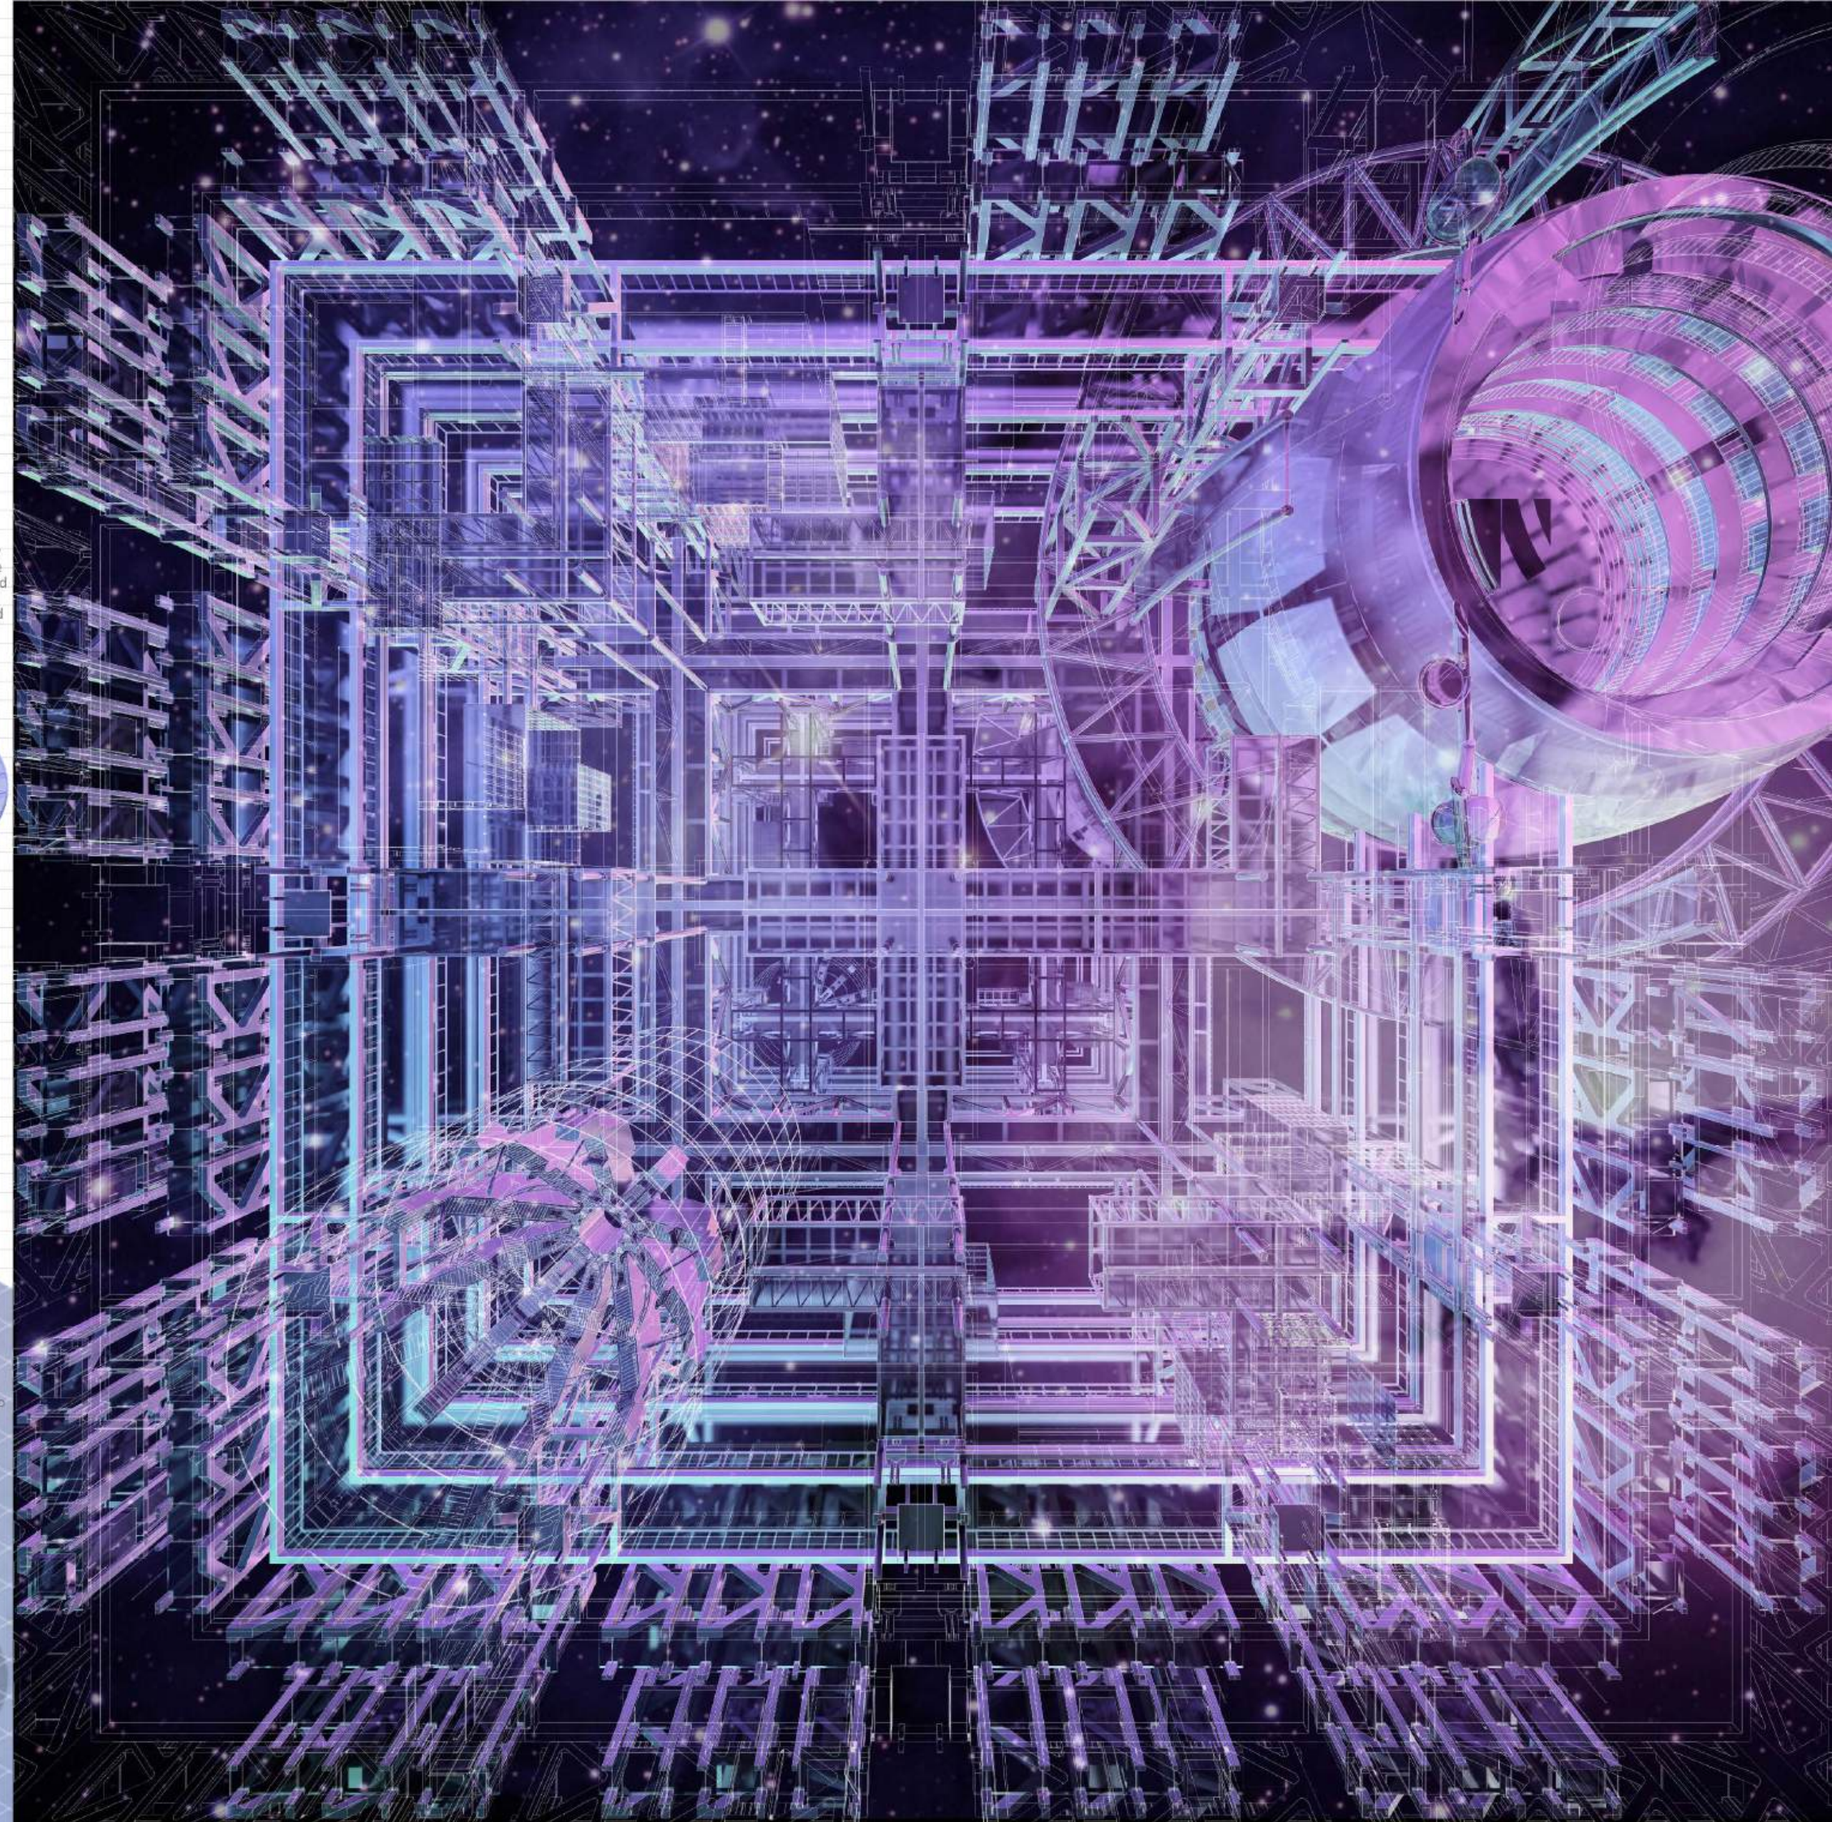

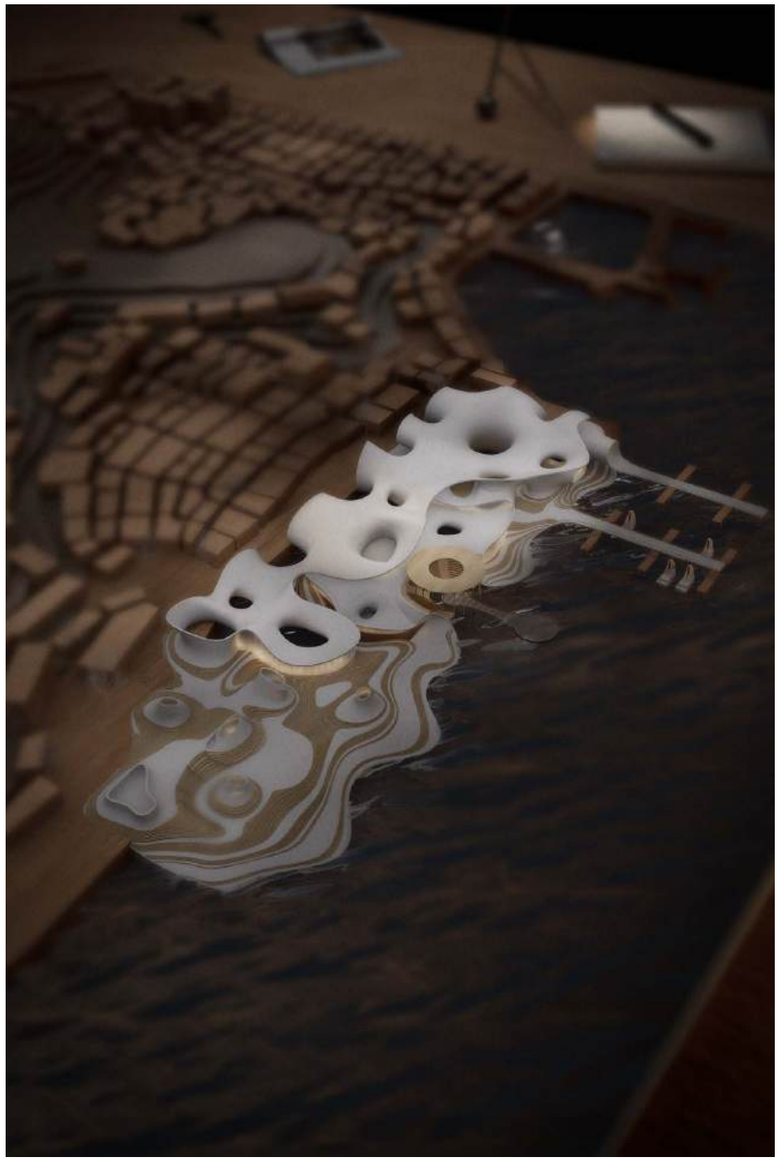

In modern cities, buildings are not merely functional spaces but also significant expressions of culture and art. This design centres around music as its core theme, integrating various types of music spaces to create a diverse and captivating architectural environment. KTV, vinyl spaces, and concert venues within the project site are not just components of the building facade but visual representations of music culture. In terms of spatial composition, background music areas and street performance spaces are strategically designed as pivotal nodes for vertical and horizontal circulation. Vertical truss structures and horizontal platforms organically connect different music spaces, breaking away from traditional layout patterns to enhance spatial coherence and exploration. Users can seamlessly move through and experience various music cultural scenes.The introduction of unique spherical structures and Live House spaces adds depth and intrigue to the building, serving not only as visual focal points but also providing ideal acoustic environments for music performances and concerts. The layout and decor of Live House spaces enhance the atmosphere and interactivity of live performances, enriching the overall spatial experience.Structurally, truss frameworks and platforms not only support the building but also embody design principles. Through refined design elements, they enhance the building's modern aesthetic appeal and spatial efficiency.This design seamlessly integrates various music environments, enriching the spatial experience while expressing the essence of contemporary urban culture.

# THE LITTORAL ZONE

Natural Forms Exploration

Team Work
Location: Zhoushan, China
Time: 2024

Sea-eroded landforms refer to the distinctive coastal topographies sculpted by the erosive forces of oceanic water bodies, including waves, tides, and currents.

These formations chronicle the history of coastal shifts and sea-level fluctuations. Early inhabitants of islands and coastlines developed profound interactions with tidal rhythms, finding shelter within the natural spaces carved by marine erosion. Thus, primordial coastal peoples gained rich spatial experiences within these eroded landscapes from earliest times.

This project, THE LITTORAL ZONE conceived within the context of Zhoushan City's cultural tourism revitalisation initiative requiring a visitor centre on Ant Island, centres its design around the interplay between the ebb and flow of sea-eroded landforms and the evolving spatial experiences of island residents.

## HISTORY

### Natural Changes

Millennia of tidal action and marine erosion have sculpted a rich array of sea-carved landforms.

### Natural Dwelling

Caves formed by sea erosion or rock shelters beneath cliffs provided primitive humans with natural shelter.

### Stable Food Supply

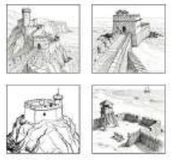

Tidal waters provided early humans with a stable and diverse food source, and aquaculture has developed to the present day.

### City Defences

Following the emergence of cities in human civilisation, people harnessed geographical advantages to construct fortifications.

### Residential Remains

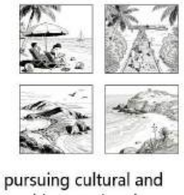

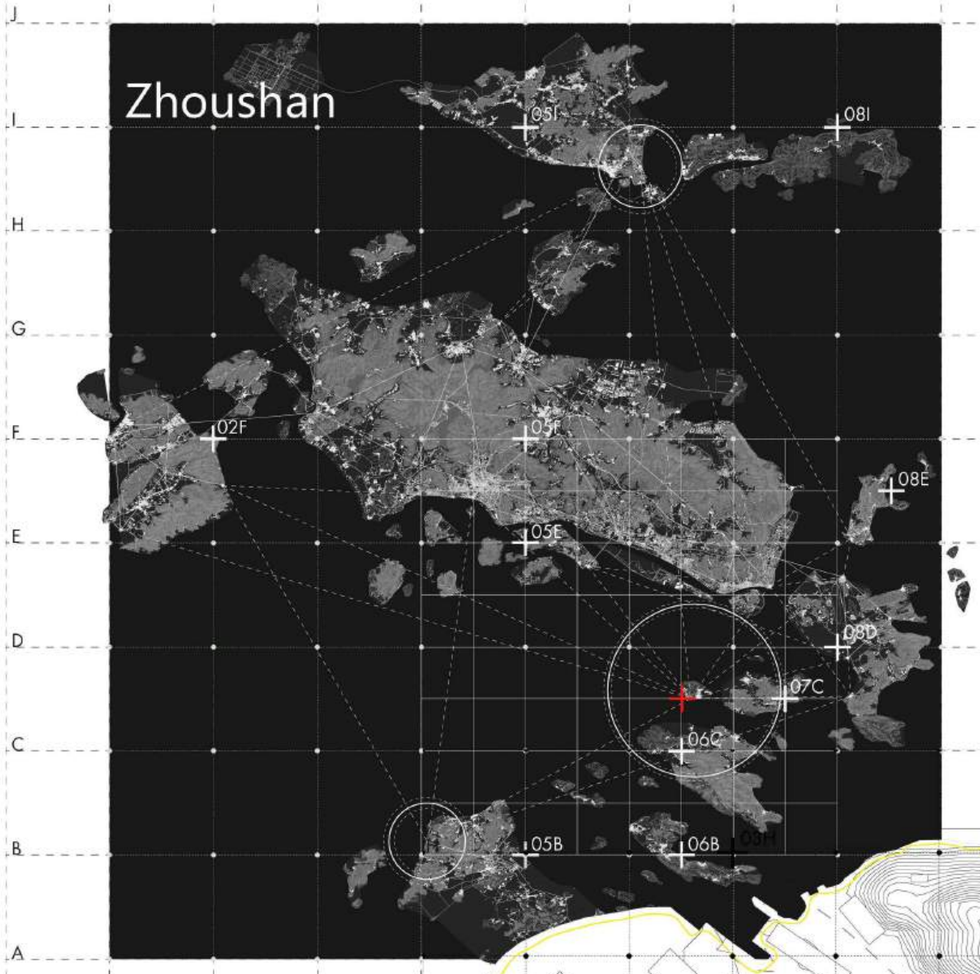

Owing to the high cost of modernisation on the island, residents have gradually relocated to the main island or even other cities.

### Tourism Revitalisation

Island regions are now pursuing cultural and tourism development to achieve regional revitalisation.

# Ant Island

## TIDAL CHANGES

### TIMETABLE

Quarter1 Quarter2 Quarter3 Quarter4

By analysing the average tidal variations across all four seasons at the site, a relatively stable pattern emerges: twice daily, the sea undergoes a rise and fall, with the difference between high and low water levels generally not exceeding 4 metres.

## PEOPLE

### Islanders

The indigenous islanders primarily engage in fishing, necessitating the fulfilment of their daily living, working, and recreational needs.

### Cultural & Tourism Staff

To meet the island's cultural tourism development requirements. The space must facilitate their ability to serve others effectively.

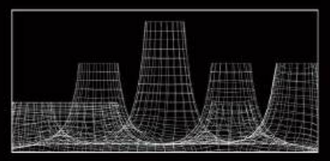

### Tourist

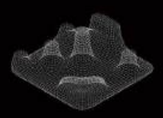

Tourist travelling to islands seek experiences that embody the unique character of island life, requiring spaces to be exceptionally engaging and captivating.

## STACKS

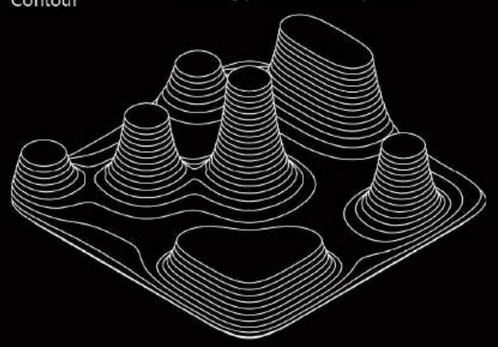

Concept

Sea stacks are the most iconic feature, capable of drawing both footfall and attention. They provide a visual focal point and spiritual centre for the site, serving as naturally sculpted gathering places and social anchors.

Consequently, the sea stack cluster functions as a family-oriented gathering point, with hollowed-out columns creating private indoor spaces.

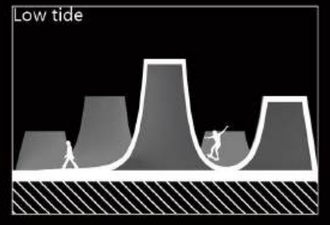

Contour

Plan

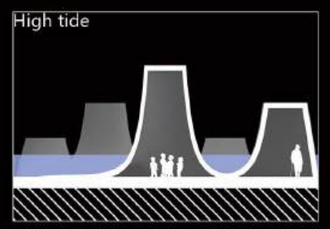

Section view

The space is fully open.

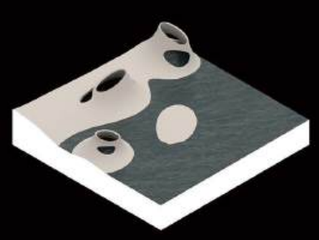

Indoor activities may continue.

Low tide

High tide

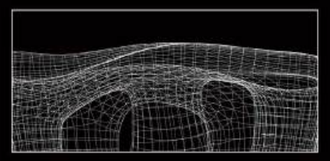

Process

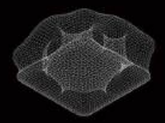

The hollowed-out interior of the column forms intimate, domestic-scale private compartments. It provides each small unit with a sense of belonging, and after high tide, it creates a physical barrier from the outside world.

## CLIFFS

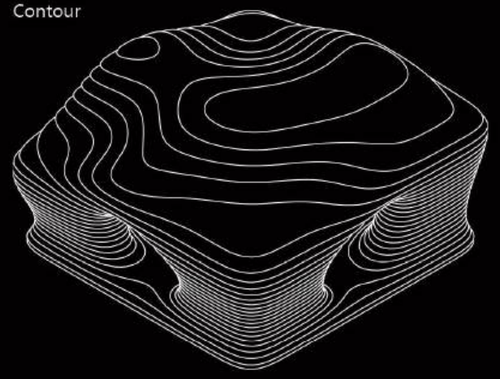

Concept

Sea-eroded cliffs provide an ideal cantilevered platform, offering sweeping vistas.

Visitors may gaze afar from the railings set against visually striking vertical faces, experiencing the openness and awe inspired by height and precipice. This is a place for contemplation, connecting sky, sea and the inner self.

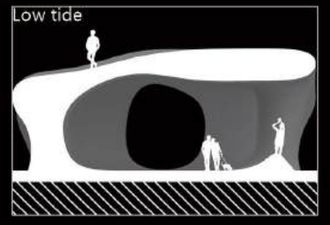

Contour

Plan

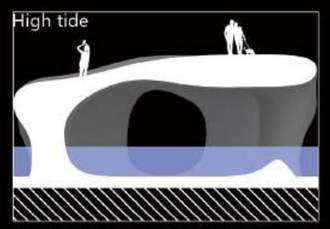

Section view

People experience from different floors.

The space at the bottom was flooded.

Low tide

High tide

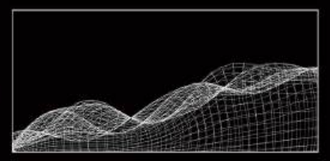

Process

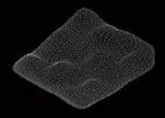

Utilising the vertical elevation of the cliff face, a viewing platform has been constructed. It serves not only as a physical vantage point but also as a ceremonial space, inviting contemplation and dialogue.

## HILL

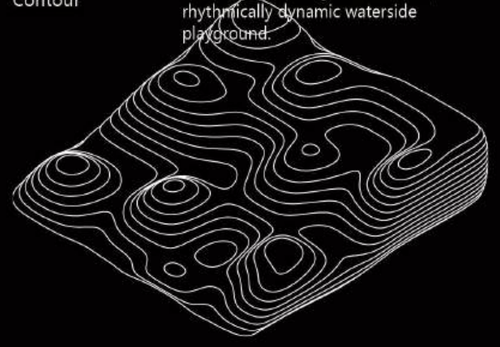

Concept

The scattered reef communities among the sea-eroded residual hills form an engaging interactive terrain rich in biodiversity. Water level variations and crevices create shoals, hollows and winding pathways, encouraging exploration and play within this space.

Visitors witness fishermen gathering seaweed and may even participate themselves, making this a vibrant, rhythmically dynamic waterside playground.

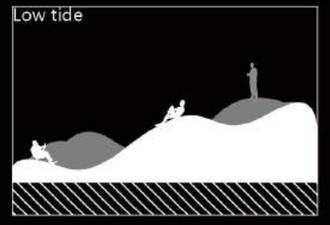

Contour

Plan

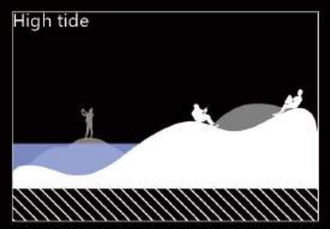

Section view

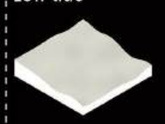

People define their own activity spaces

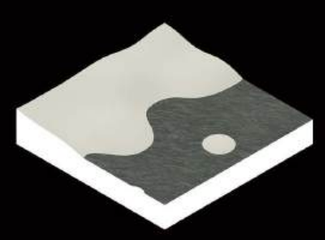

Some are surrounded by seawater.

Low tide

High tide

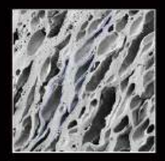

Process

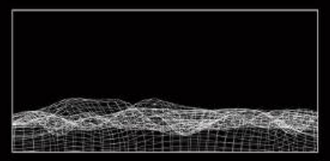

Integrated as a connecting element.

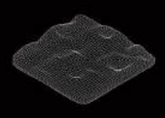

The space, modeled on a reef community, features walkways, seating areas and shallow pools for wading. It replicates the intertidal zone ecosystem, serving as a natural classroom where visitors can experience the joys of foraging by the sea.

## PLATFORM

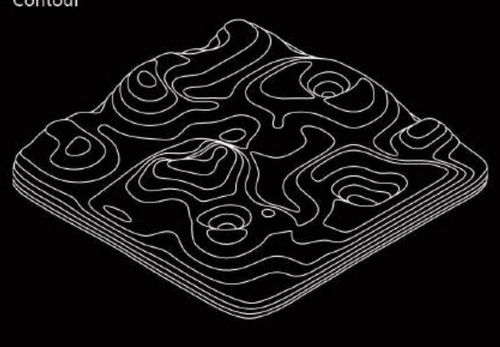

Concept

The relatively open and level base of the sea-eroded platform resembles a stage left behind by the retreating tide.

Gentle undulations provide a sheltered sense of stability, making it ideal for diverse activities. It serves as a communal living room where visitors, islanders and the sea meet intimately, bearing collective memories.

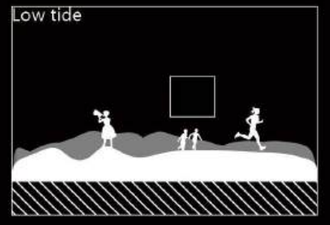

Contour

Plan

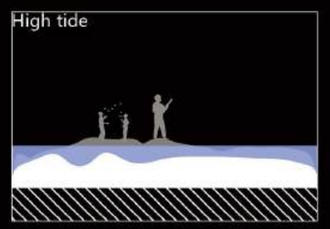

Section view

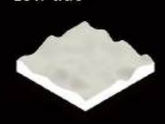

Platform can support open activities.

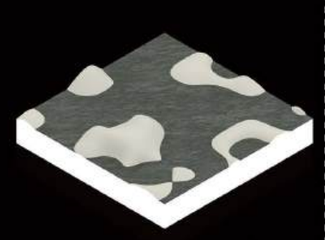

The activity varies with sea level.

Low tide

High tide

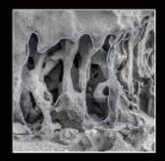

Process

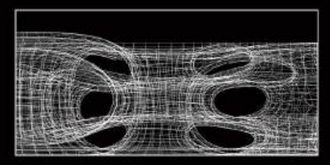

Integrated as a connecting element.

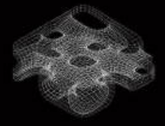

Through micro-topography treatment, an open-air activity base is formed. Like a carpet unfurled towards the sea, it hosts public life such as markets, gatherings and exhibitions, serving as an inviting "ocean living room".

## CAVES

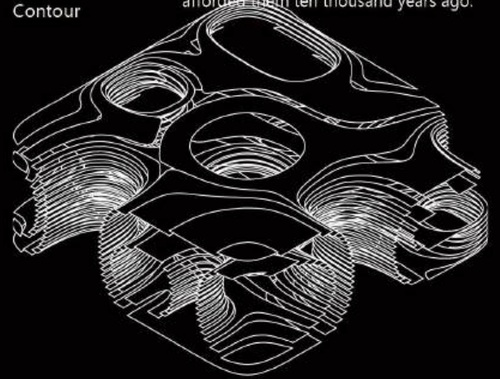

Concept

Sea caves are cavities carved by the tides, where interlacing crevices weave patterns of light and shadow. The space shifts between narrowness and openness, forming a labyrinthine experience in the joy of discovery.

As a natural sanctuary for our ancestors, this space allows us to empathise with the primordial protection nature afforded them ten thousand years ago.

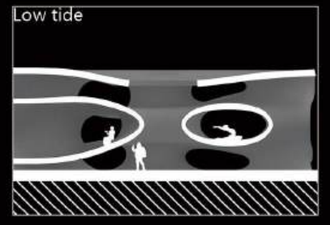

Contour

Plan

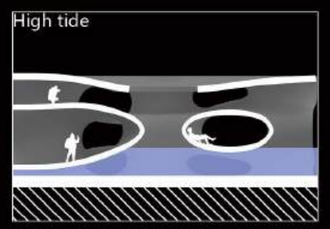

Section view

The cave's layout is complex.

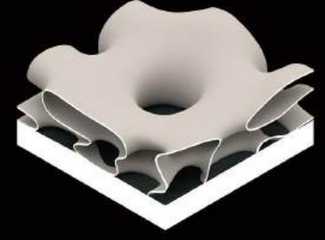

More complex spatial configuration.

Low tide

High tide

Process

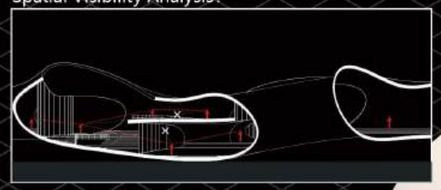

The intricate network of caverns has been transformed into explorative interiors rich with pathways. By combining natural light from openings with artificial illumination, alternating light and shadow is created, evoking primal instincts of shelter and discovery.

## MARKET

This bustling marketplace offers islanders' seafood and handmade crafts for visitors to sample and purchase. It serves as a central social hub fostering interaction between locals and guests, immersing them in the authentic rhythm of island life.

Spatial Visibility Analysis:

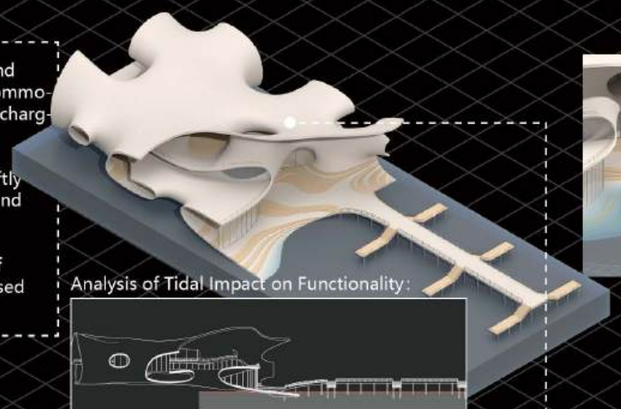

## LOUNGE

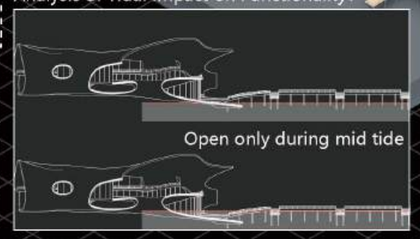

3.

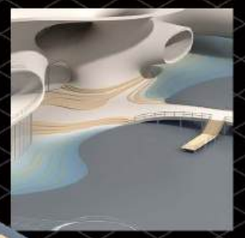

Offers a tranquil, comfortable and sheltered space for repose. Accommodates essential needs for rest, recharging, reading and sea-viewing. The space evokes the tranquil ambience of a cave's depths. Softly curved surfaces mitigate noise and anxiety.

The layout mimics scattered reef formations, creating semi-enclosed private nooks.

Analysis of Tidal Impact on Functionality:

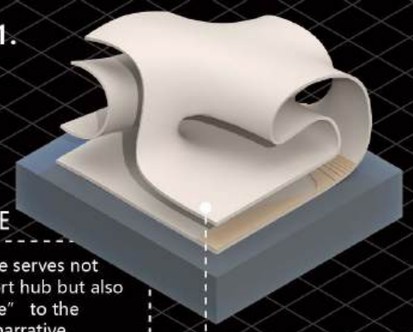

Spatial Visibility Analysis:

1.

## VISITOR CENTRE

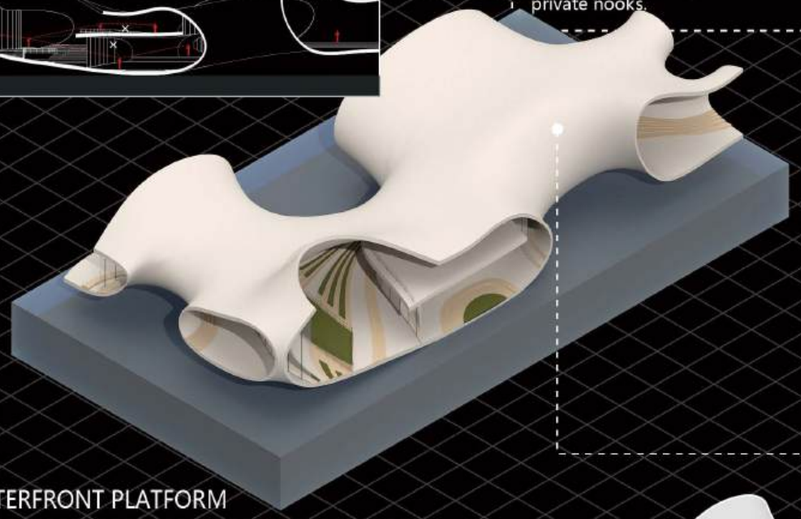

The Visitor Centre serves not only as a transport hub but also as the "prologue" to the project's spatial narrative, conveying the design theme of sea-eroded landforms through an immersive experience.

The entrance features a low ceiling that abruptly opens into a spacious interior. Natural light streams through "apertures", creating shifting patterns of light and shadow that guide visitors through the service process as they proceed.

Spatial Visibility Analysis:

4.

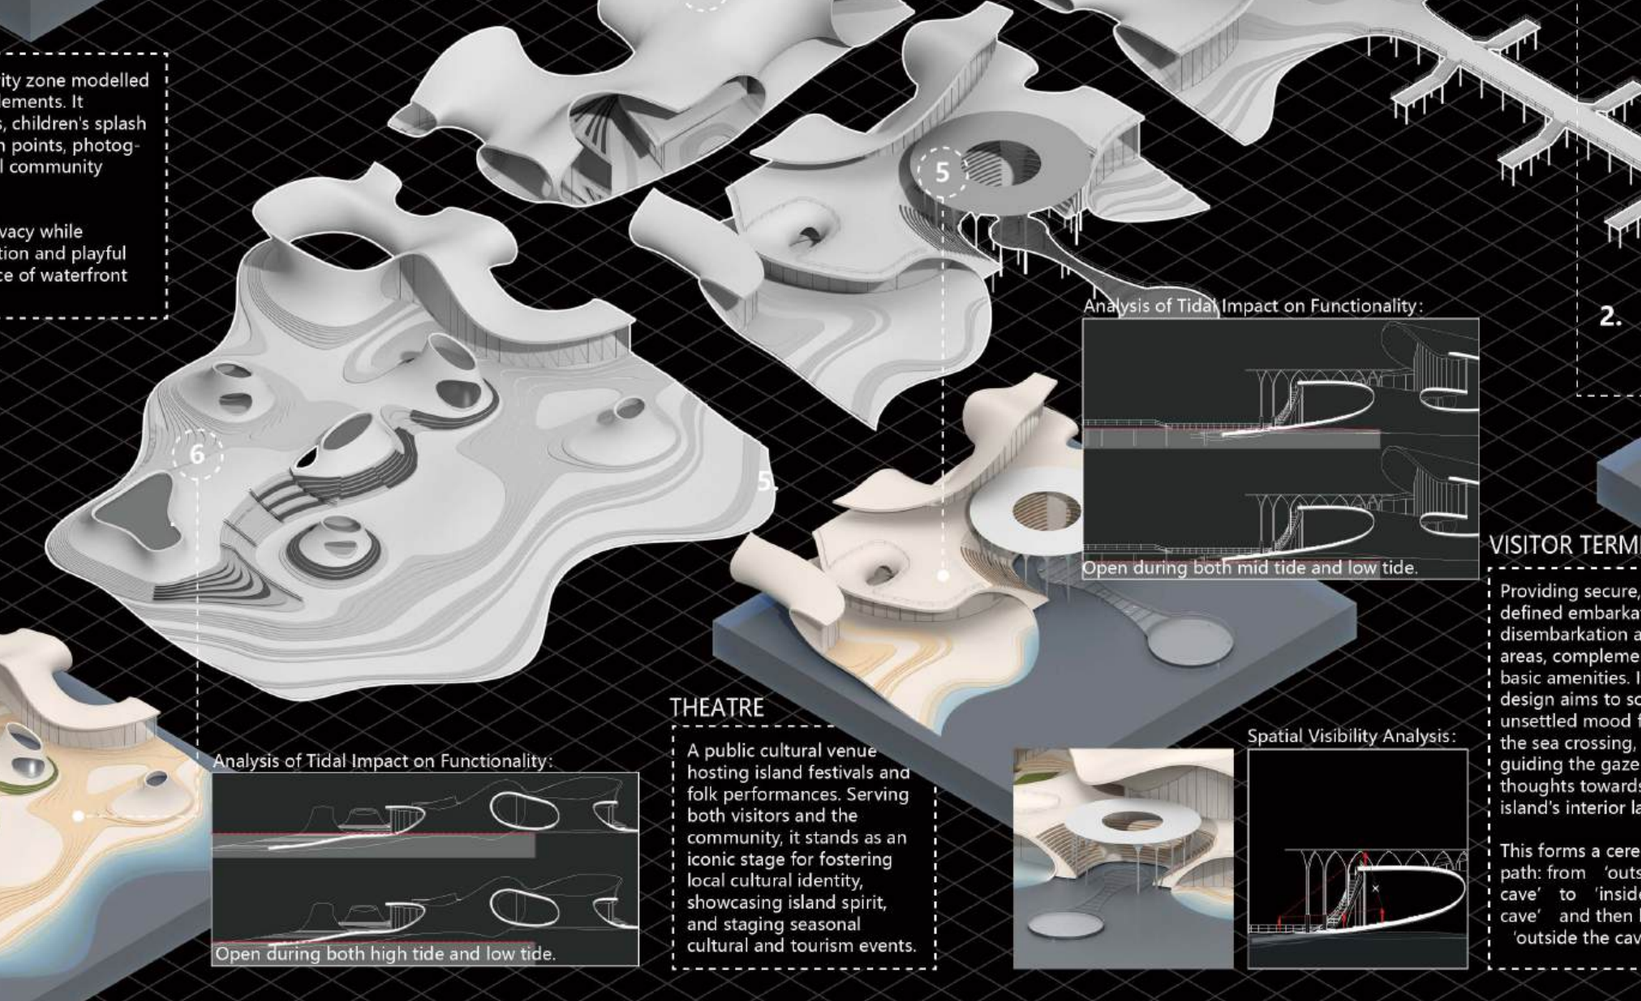

## WATERFRONT PLATFORM

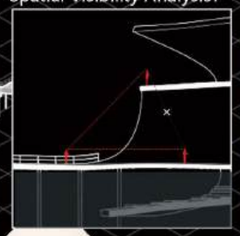

A multifunctional waterside activity zone modelled on traditional fishing village settlements. It integrates family relaxation areas, children's splash zones, shallow-water observation points, photography spots, and spaces for small community gatherings.

The design safeguards family privacy while encouraging community integration and playful interaction, recreating the essence of waterfront living.

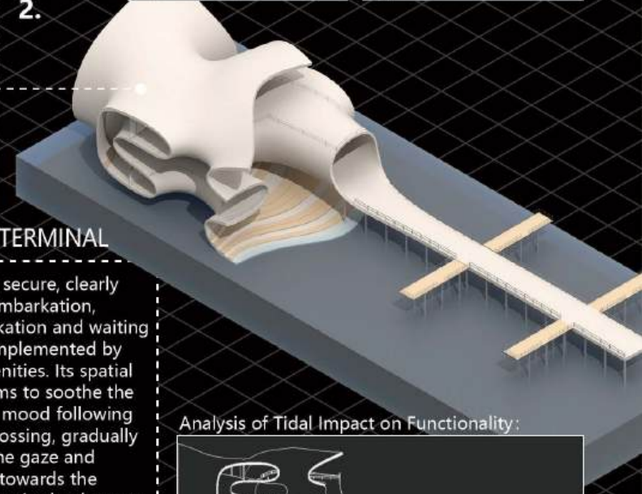

Spatial Visibility Analysis:

2.

Analysis of Tidal Impact on Functionality:

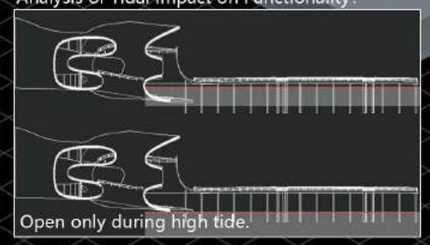

## VISITOR TERMINAL

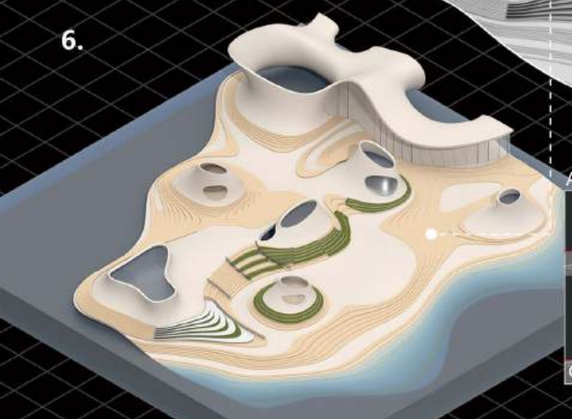

Providing secure, clearly defined embarkation, disembarkation and waiting areas, complemented by basic amenities. Its spatial design aims to soothe the unsettled mood following the sea crossing, gradually guiding the gaze and thoughts towards the island's interior landscapes.

This forms a ceremonial path: from 'outside the cave' to 'inside the cave' and then back 'outside the cave'.

Analysis of Tidal Impact on Functionality:

Analysis of Tidal Impact on Functionality:

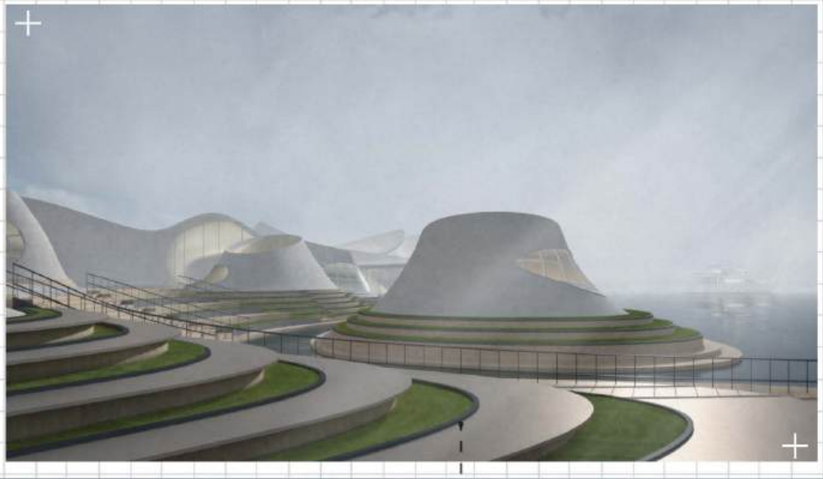

## THEATRE

A public cultural venue hosting island festivals and folk performances. Serving both visitors and the community, it stands as an iconic stage for fostering local cultural identity, showcasing island spirit, and staging seasonal cultural and tourism events.

Spatial Visibility Analysis:

As one enters these spaces, translated from the forms of sea erosion, one senses nature's inherent power and shelter.

The ebb and flow of the sea shall continue to play between the platforms and the residual hills, sunlight shall still trace its paths through the crevices of the "caves", and the wind upon the cliffs shall forever carry with it a sense of openness and contemplation. The architecture shall blend discreetly into this natural spectacle, unfolding for millennia, becoming part of it.

The sea breeze whispers, the tide speaks low,

On Ant Island, time moves slow.

Rocks carved with traces of history's hand,

Nature and man, in harmony stand.

In this meeting of sea and land,

We find belonging, peace so grand.

The island's rhythm quietly plays,

Telling the stories of its ancient days.

Waterfront Platform

Market

Outdoor Theater

Theater Hall

Vistor Centre

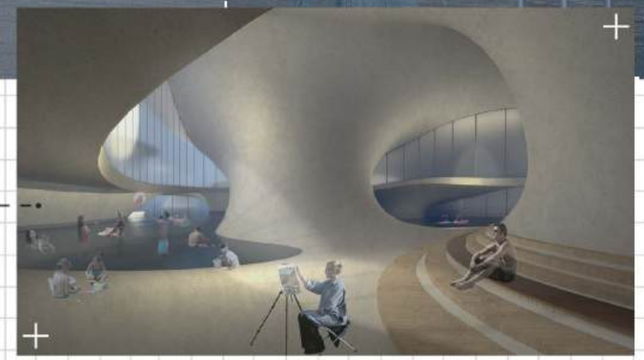

Dock

We endeavour to make architecture a vessel for time and a theatre for memory. Here, nature's carvings and the history of human civilisation may be seen, touched and heard within the same space.

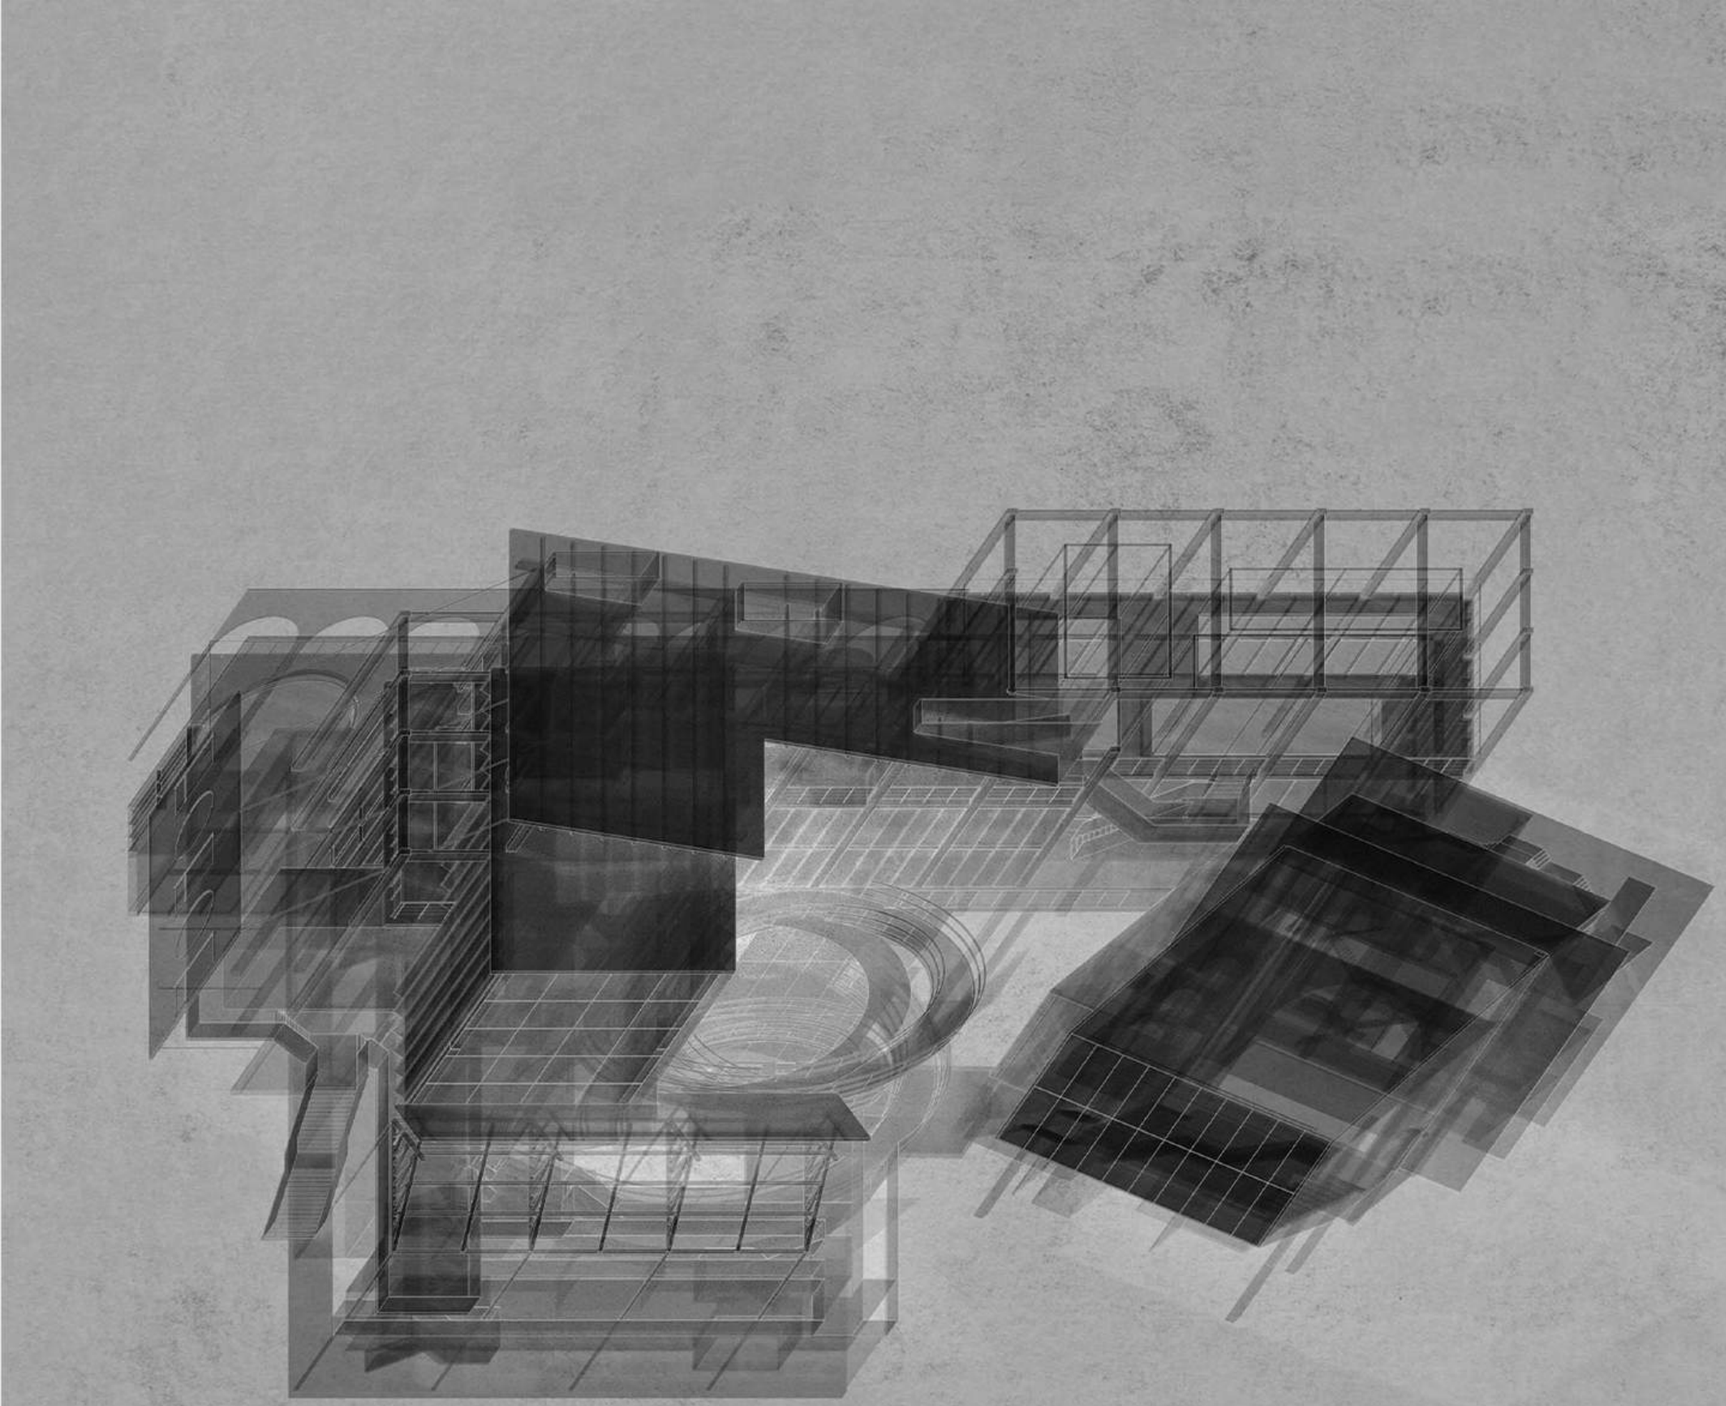

It serves not only the island's indigenous inhabitants and visiting travellers, but aspires to be a bridge connecting the islanders' gradually dispersing nostalgia with modern people's yearning for authentic experiences.

We hope this space may gently revitalise the island's communal life, offering a place for departed memories to find rest and for visiting curiosity to gain depth.

Ultimately, it points towards a rediscovery of the wisdom of living in harmony with the sea—not a nostalgic flight from modernity, but a way to settle the contemporary soul's yearning for belonging and tranquillity within the eternal rhythm of the tides.

# Lost History

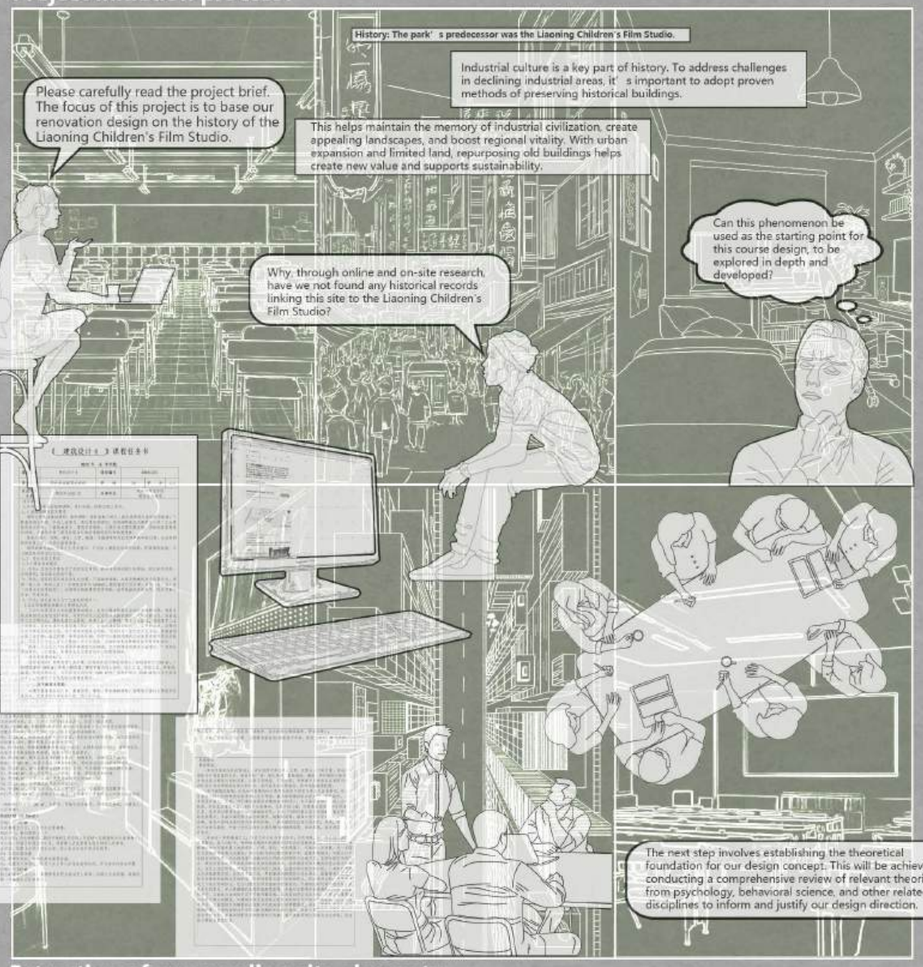

Fragmented Spatial Narratives in a Former Film Studio

Individual work
location:Shenyanng, China
Time:2025

This project originates from a school assignment, which requires transforming the Liaoning Children's Film Studio into a cultural and sports center. During the initial research, I discovered that there was no relevant historical information about the site. This "absence" of history prompted me to reconsider the concept of the design. I decided to explore how to express the partiality and multiplicity of history through the design, focusing on how space can convey different historical perspectives.

Based on architectural narratology, this project suggests that architecture is not only a physical space but also a carrier of culture and emotion. Through the spatial layout and design, visitors encounter historical fragments along different paths, gradually piecing together a complete historical narrative, thus reflecting on the partiality and multiplicity of history.

## Project initiation process:

## Extraction of surrounding site elements:

## Analysis of failed cases:

The Shenyang Fangyuan Building adopts an overtly literal symbolism, directly turning the form of an ancient coin into architecture. This concrete symbolization is often criticized as a design "shortcut" that flattens cultural meaning into a single visual icon, weakening the role of space, light, and material as carriers of expression. As a result, the building becomes a mere symbol container, sharply contrasting with I.M. Pei's abstract yet evocative approach to Eastern artistic conception in the Suzhou Museum.

The China Pavilion at the Osaka Expo adopts a semiotic strategy, treating the "bamboo scroll" as a literal cultural symbol, similar to the Shenyang Fangyuan Building's figurative formal translation. Here, metaphor takes precedence over tectonic logic: the shift from a two-dimensional artifact to monumental architecture risks compromising material authenticity and structural integrity, privileging symbolic representation over spatial and constructive coherence.

The Shili Xiang Zun building epitomizes literal symbolism in contemporary Chinese architecture, directly translating a wine vessel into built form and privileging visual spectacle over function. Its sealed, ceramic-like envelope of metal grilles compromises basic office needs such as daylight and ventilation. As a result, the project stands as a clear example of commercial capital shaping architecture, where corporate branding via iconic imagery overrides spatial innovation and urban integration.

Many so-called "traditional" Chinese developments merely replicate antique styles, reducing heritage to surface symbols like decorative dougong divorced from structural logic and cultural depth. Detached from site and climate, this decontextualized imitation reflects commercially driven cultural laziness, producing lifeless specimens that commodify rather than preserve tradition. Genuine innovation lies in abstracting and reinterpreting traditional spirit, not copying historical forms.

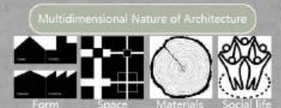

The Shenyang Fangyuan Building adopts a highly literal symbolism, directly turning an ancient coin into architectural form. This design "shortcut" flattens complex cultural meaning into a single visual icon, weakening the role of space, light, and materials, and reducing architecture to a mere symbol—sharply contrasting with I.M. Pei's abstract expression of Eastern artistic conception in the Suzhou Museum.

The Yulin Folk Art Building in Guangxi exemplifies a "vernacular construct" that defies professional norms. Despite issues of structural integrity and material authenticity, it functions as valuable socio-cultural documentation. Its hybrid symbols and rough spatial composition embody raw folk creativity confronting institutional aesthetics, questioning disciplinary boundaries and exposing tensions between grassroots expression and professional standards.

# Architectural Narratology

## 1.Research Background and Origins

### Multidimensional Nature of Architecture

Architecture conveys its complex connotations through form, space, materials, and social life.

### Emergence of Architectural Narratology

Architectural narratology, as an interdisciplinary field, explores how to effectively express social and cultural information through architecture.

### Challenges for Architects

Facing the questions of "What to tell?", "How to tell?", and "How is the narrative effect?"

### Impact of Globalization and Information Technology

Architecture has gradually detached from regional culture and place spirit, becoming a symbol of politics, capital, and culture.

### Conflict between Globalization and Local Culture

The conflict between globalization and local cultural identity became prominent from the 1970s, especially in developing countries' modernization.

### Comparability between Narrative and Architecture

Narrative and architecture are similar in structure, expression, and experience, both involving a process of information transmission. Architecture transmits information through space and materials, similar to how literature transmits stories through text.

### Describing and Expressing Space

Using techniques like images, comics, films, and multimedia to express the semantics of space.

### New Perspectives and Methods

Providing new approaches for understanding, expressing, and evaluating architecture, particularly for enhancing regional cultural identity and spatial quality.

## 2.The Historical Context of Architectural Narratology

### Cross-Disciplinary Influence

The introduction of postmodernism, semiotics, phenomenology, and other disciplines promoted the intersection of architecture and narrative.

### Challenges to Architectural Aesthetics

Modern architecture's aesthetics are challenged by digitalization and avant-garde trends.

### Pioneering Practices

Bernard Tschumi and Nigel Coates introduced narrative into architectural teaching and practice, advancing architectural narratology.

## 3.Theoretical Foundation of Architectural Narratology

### The Relationship between Narrative and Architecture

Narrative provides compositional strategies and creative inspiration, while architecture offers the material carrier and setting for narrative.

### Ways Narrative Enters Architecture

Through the construction of monumental buildings, representation of historical scenes, symbolic themes, and integration with regional landscapes

## 4.Research Topics in Architectural Narratology

### Constructing Spatial Imagery

Transforming stories and themes into spatial structures and design elements, emphasizing spatial sequences, pathways, scene transitions, and experiences.

### Examining and Optimizing Space

Viewing architecture as a vehicle for social and cultural practices, using narrative strategies to activate the relationship between people, places, and memory.

## 5.Significance and Outlook of Architectural Narratology

### A Dynamic Social and Cultural System

Architecture is not just for narrative but a dynamic system that reflects social, historical, and cultural changes.

### Further Development

Architectural narratology has made significant progress but still requires further development, especially in practical applications.

## 1. Introduction of Theory
**(Architectural Narratology and the Partiality of History)**

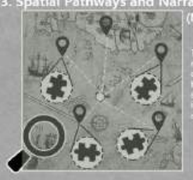

At the outset, architectural narratology suggests that architecture is not merely a physical space but a carrier of culture and emotion. The partiality of historical writing inspired the core idea of the design—how to express different historical perspectives through space and reflect the subjectivity in historical narratives.

## 2. Design Concept (Fictional Script and Historical Fragments)

The design concept is based on a fictional historical script, where "historical fragments" are scattered throughout the space, breaking the traditional linear narrative. Visitors can experience different historical information along various spatial paths, showcasing the multi-dimensionality of history.

## 3. Spatial Pathways and Narrative Integration
**(Non-linear Narrative Paths)**

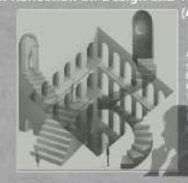

The core of the design lies in the layout of non-linear narrative paths. Visitors encounter different historical fragments through various routes, with each experience offering new historical interpretations, gradually piecing together a complete historical picture.

## 4. Visitor's Historical Fragmentation

Visitors encounter different historical fragments through various paths, gaining new perspectives with each visit. This process allows them to gradually piece together a complete historical narrative and form a personalized understanding of history. It encourages reflection on the multiplicity of history and the partiality of historical narratives.

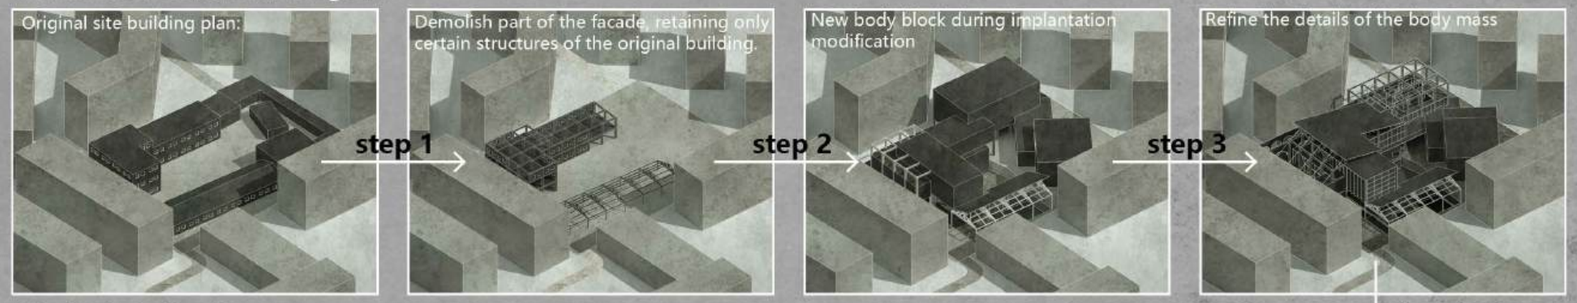

## 5. Reflection on Design and Theory Integration
**(Architecture as a Dynamic Cultural System)**

Architecture, as a dynamic socio-cultural system, not only carries history and culture but also stimulates profound reflection on the partiality and multiplicity of history. Through spatial design, visitors perceive and interpret history in physical space, facilitating the integration of theory and practice.

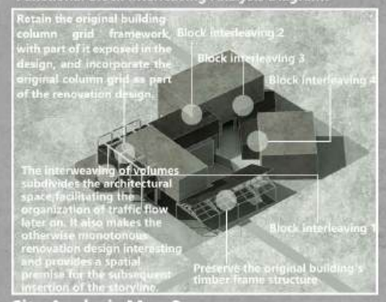

## Architectural Generation Diagram:

## Exploded view:

## Plot Analysis Chart:

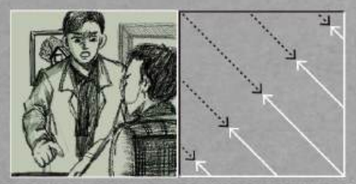

### PLAY 1 : Siege

**1.The Producer Rejects Selling the Copyright**
A buyer offers to purchase the film's copyright, hoping to profit quickly, but the producer firmly rejects the deal, insisting that the artistic value of the film is more important than money.

### PLAY 2 : Confrontation

**2.The Producer Discovers the Director's Plan to Sell the Copyright and Confronts Him**
The producer discovers that the director has decided to sell the copyright to save the company. The two have an intense argument, as the producer cannot accept the director's decision to sacrifice the film's artistic integrity for money.

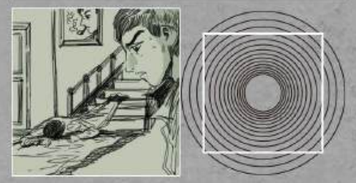

### PLAY 3 : Escape

**3.The Employee Finds the Producer's Body**
An employee discovers the producer's body in a pool of blood at the stairwell, shocked and horrified. The employee mistakenly believes the director is the murderer and decides to take action.

### PLAY 4 : Misperception

**4.After the Argument, the Director Rushes to Make the Deal**
After the argument, the director, feeling conflicted, rushes to complete the deal with the buyer to sell the copyright, despite his internal struggle.

### PLAY 5 : Coercion

**5.The Employee Threatens the Director for a Silence Fee**
The employee, assuming the director is responsible for the murder, threatens to expose him unless he is paid a silence fee, putting the director in a difficult position.

### PLAY 6 : Exploration

**6.The Reporter Investigates and Seeks the Truth**
A reporter begins to investigate the producer's death, gathering clues and uncovering the director's role in the copyright sale, piecing together the truth bit by bit.

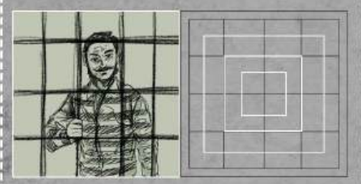

### PLAY 7 : Choice

**7.The Reporter Confronts the Director, Giving Him a Choice**
After uncovering the truth, the reporter gives the director an ultimatum: either confess to selling the copyright and go to jail, or have the factory's secrets exposed, leading to its closure.

### PLAY 8 : Relief

**8.The Director Chooses to Go to Jail**
After much deliberation, the director chooses to confess, admitting to the copyright sale in order to protect the future of the company, ultimately heading to prison.

The spiraling ramp represents the capital, while the box-shaped space below symbolizes the producer. The ramp spirals upwards, gradually enclosing the producer's space. From the ramp, one can peer through the glass into the producer's workspace, symbolizing the producer's firm resolve to uphold artistic ideals and refuse to bow to capital pressures.

PLAY 1 : Siege

The intertwined staircases symbolize the conflict between the producer and the factory manager due to differing ideologies. In the theater, the curtains are fully raised when there is no performance, and through the openings at the front, one can faintly see the figures on the stairs, hinting at the misunderstanding and misperception of the employees in the next scene.

## 1.The Producer Rejects Selling the Copyright

PLAY 2 : Confrontation

## 2.The Producer Discovers the Director's Plan to Sell the Copyright and Confronts Him

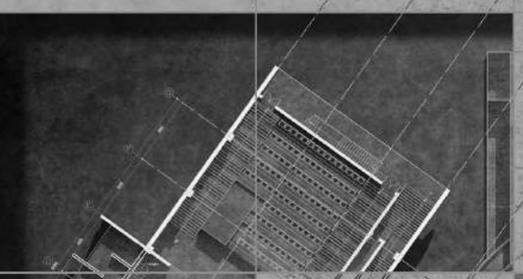

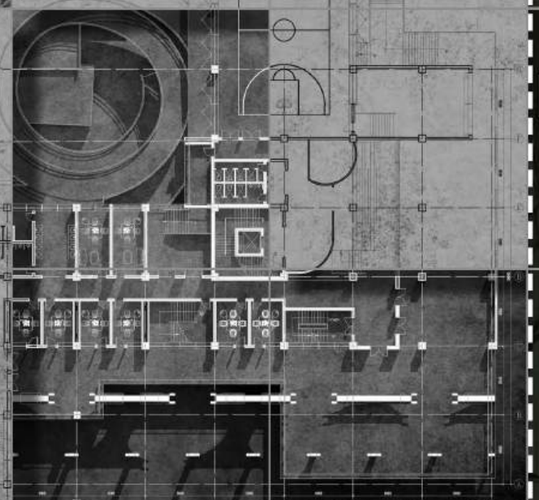

Easter egg design: Fragments of the storyline are subtly visible through the gaps in the walls of the chess room, offering the audience a more complete view of the story while also enriching the narrative space.

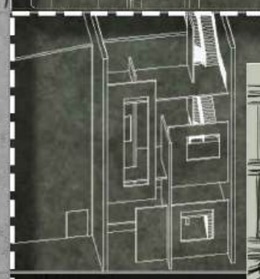

The irregular partition walls and openings hint at the employees' misperception. The space where the producer's body is found connects to the area where the producer and factory manager argued, further deepening the employees' misunderstanding that the factory manager is the murderer.

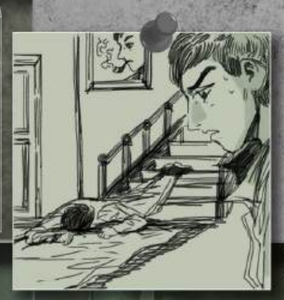

Second Floor Plan

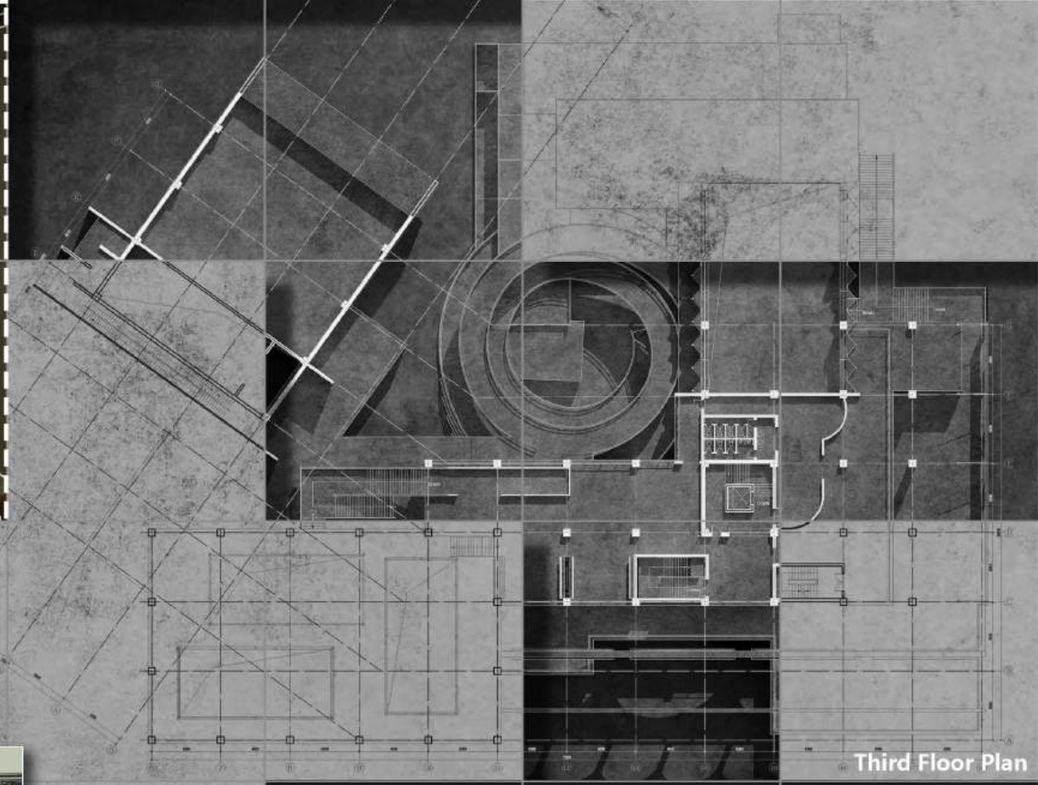

PLAY 4 : Misperception

In the smooth glass facade, a staircase disrupts the unity of the space, symbolizing conflict and aggression, and hinting at the scene where the employees threaten the factory manager. As the staircase leads to an elevated platform, the conflict between the employees and the factory manager intensifies, building towards the climax of the story.

## 4.The Employee Finds the Producer's Body

Third Floor Plan

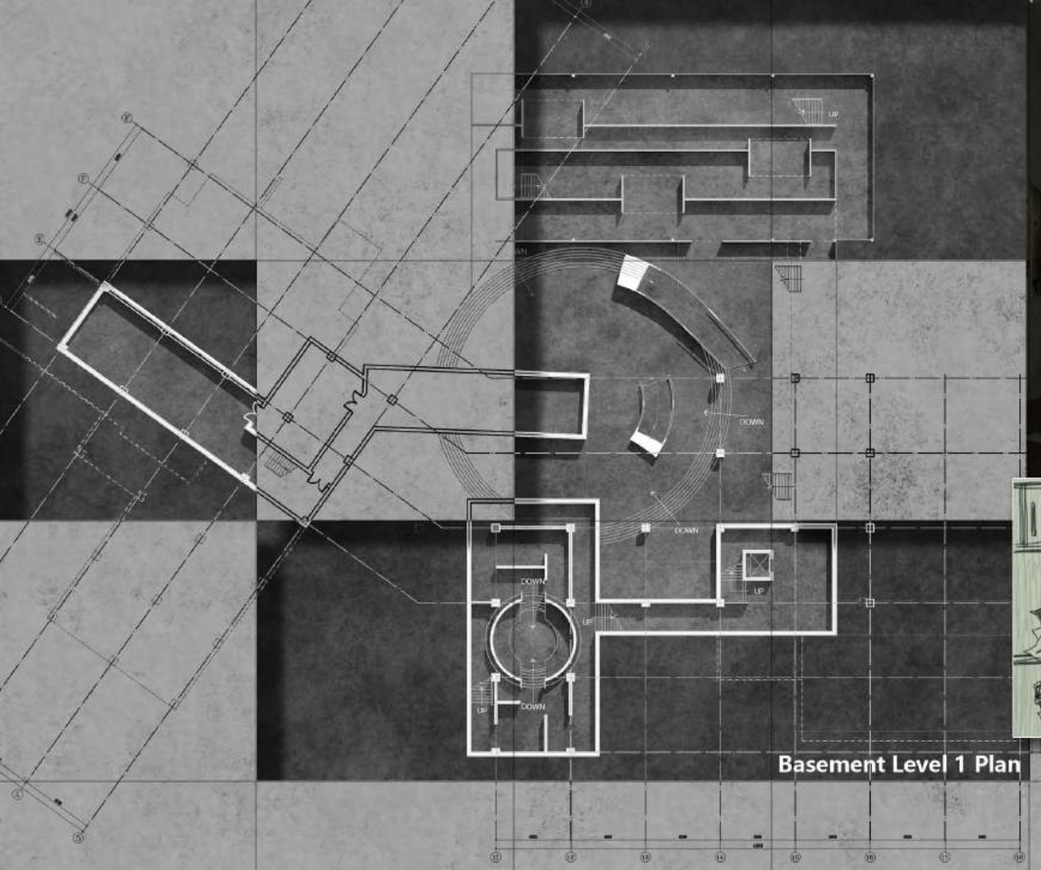

## 5.The Employee Threatens the Director for a Silence Fee

PLAY 5 : Coercion

Section

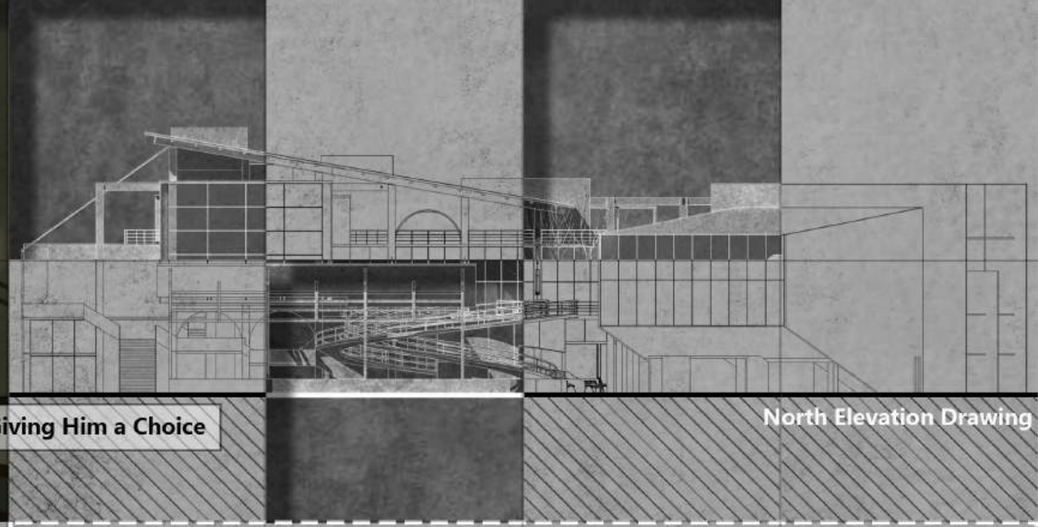

Basement Level 1 Plan

PLAY 7 : Choice

7.The Reporter Confronts the Director, Giving Him a Choice

North Elevation Drawing

On the left is a narrow gap, and on the right, an escape staircase, representing the two choices the journalist gives the factory manager: one is to let the factory collapse and escape guilt, but remain trapped in isolation; the other is to confess, face legal consequences, but seek redemption and peace. These two paths test his moral boundaries and survival choices.

The space where the journalist seeks the truth is constructed with partition walls, forming a simple "maze." This symbolizes the process of uncovering the truth through exploration. The maze's complexity reflects the layers of mystery surrounding the truth, and as the journalist ventures deeper, the space gradually becomes clearer, ultimately revealing the hidden facts.

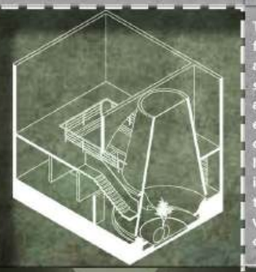

PLAY 6 : Exploration

6.The Reporter Investigates and Seeks the Truth

PLAY 8 : Relief

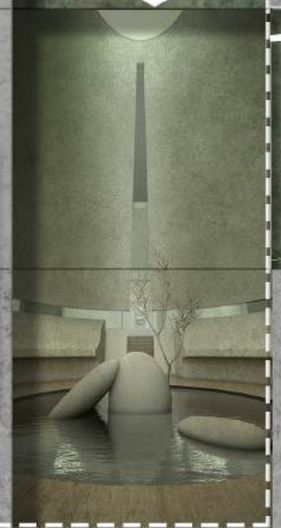

The factory manager's prison space is a meditation area, with circular walls narrowing upward. Light only enters from above, creating a sense of confinement yet inner peace. Gazing upward, the manager experiences calm and purification, symbolizing his atonement and spiritual liberation.

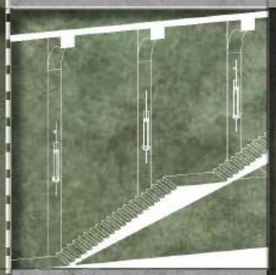

8.The Director Chooses to Go to Jail

The narrow corridor symbolizes the factory manager's urgency to strike a deal with the capital, intensifying a sense of anxiety. The repeated arches along the corridor hint at the erroneous and almost surreal nature of this decision. The continuous looping of the arches resembles an inescapable path of fate, suggesting that the factory manager's choice will lead to unavoidable consequences.

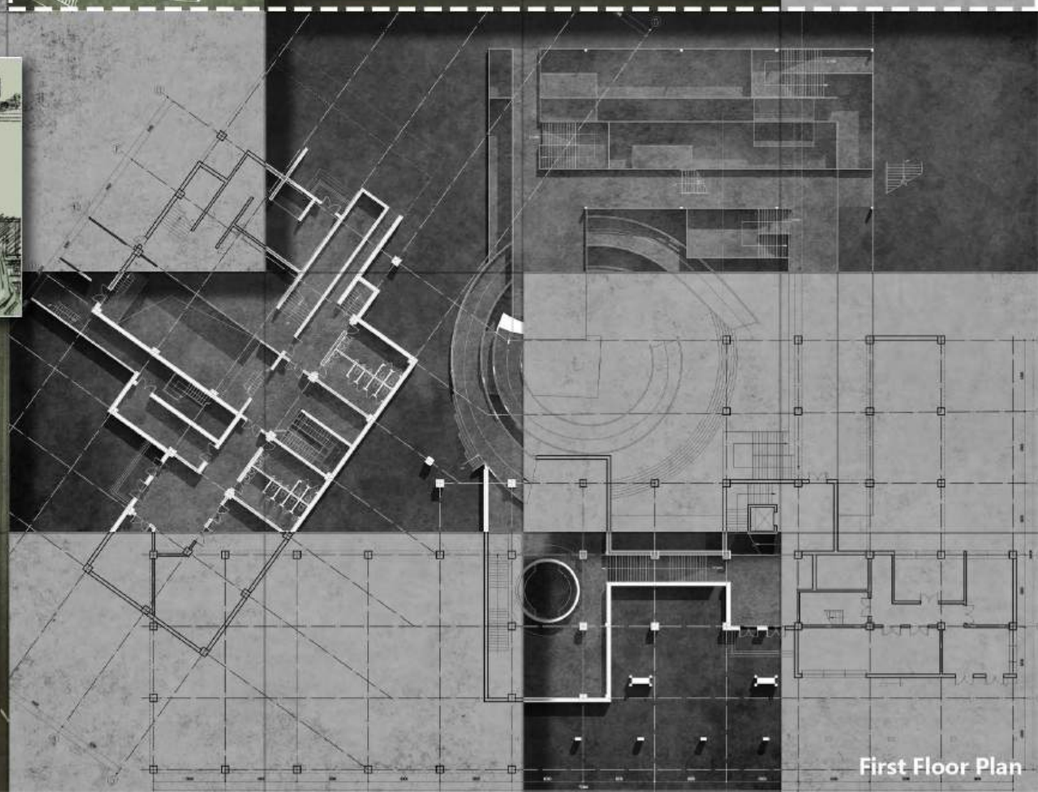

PLAY 3 : Escape

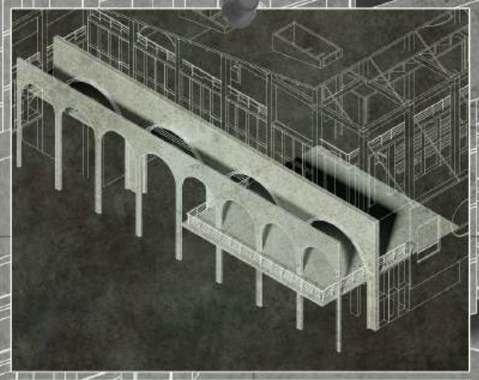

3.After the Argument, the Director Rushes to Make the Deal

First Floor Plan

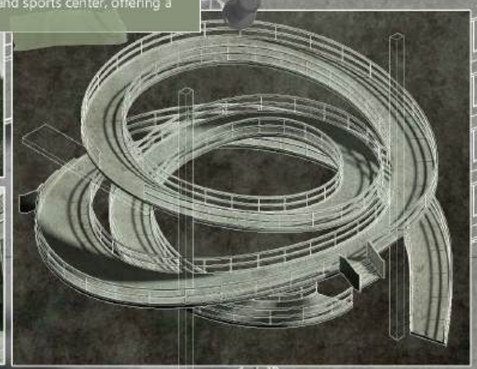

Arches appear in certain narrative spaces, providing spatial hints for the 'explorers' while also being incorporated as part of the facade design.

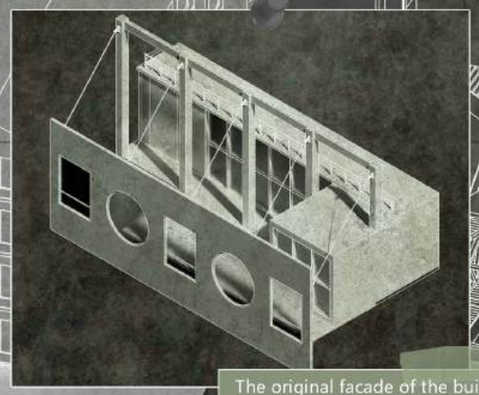

The double-spiral ramp serves both as part of the narrative space and as a strolling space within the cultural and sports center, offering a unique spatial experience.

Diagonal brace:

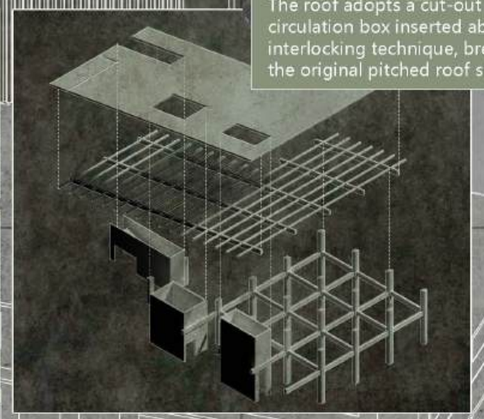

Several inclined tie rods are fixed to the columns, using tension to lift the wall

The original facade of the building is retained, with steel cables lifting the walls, preserving elements of the original structure while also integrating them into the facade design.

The roof adopts a cut-out roof form, with the circulation box inserted above the roof using an interlocking technique, breaking the monotony of the original pitched roof shape.
